LETTERS

Is That Right?

I read that August 13 is International Left-Handers Day [Don't Be Left Out, Currents, August 2018]. I also read elsewhere that a left-handed person is smarter than the average righthanded person because lefthanders have more copper and zinc in their bodies. CHARLES CHANDLER | KEMP TRINITY VALLEY EC

Growing and Mowing

The highway between lakes Toledo Bend and Sam Rayburn once had a wide variety of beautiful wildflowers and was called a scenic drive but was repeatedly mowed at the height of the bloom, a full month before it should have been mowed [Habitat Destruction, Letters, July 2018]. Now all the beautiful flowers are gone and so are the butterflies that accompanied them. JOE ANNE DAIGRE | BURKEVILLE

Cadillac Ranch Rubbish As it had been a number of years since I last visited the Cadillac Ranch, Rendezvous on

A Leading Lady

We really enjoyed All the State's a Stage [August 2018]. We have been tuned in to all things Shakespeare since our daughter, Sarah Enloe, left for Staunton, Virginia, to work with the American Shakespeare Center. She has been head of education for ASC for a few years now and is in contact with several of the groups mentioned in the story.

SAM AND CAROL ENLOE | BRYAN | BRYAN TEXAS UTILITIES

Route 66 [July 2018] inspired me to make another visit. Sadly, I was appalled at the poor condition of the area, with excessive amounts of litter scattered around the cars and all the way back out to the service road. Discarded spray cans, and even more plastic caps, were left everywhere.

The place definitely does not leave one with a good impression of old Route 66 nor of our state. **CRAIG SCHELLBACH** | BURLESON UNITED COOPERATIVE SERVICES

Editor's note: Eric W. Miller. director of communications for the Amarillo Convention & Visitor Council, offers this response: "We are aware of this issue and we hope to work with the landowner to find a solution to the trash. The landowner provides a couple of dumpsters, at his expense, along the access road that

are for the public to use. I have seen the disposal service go by and empty the dumpsters."

FDR and the Hump

According to the U.S. State Department, President Franklin D. Roosevelt never traveled to Burma or China or anywhere in the Pacific theater of World War II [Flying Roosevelt Over the Hump, Letters, July 2018]. The farthest east that he traveled was Tehran. Iran. in November and December 1943. PAUL R. SHAW | MINEOLA WOOD COUNTY EC

CURRENTS

HAPPENINGS

Monarchs Rule the Day

JASPER has hosted a fall festival for more than 40 years, but recently the event has morphed into a celebration of the annual monarch butterfly migration through East Texas. The alliance between butterflies and the community was cemented in 2015 when Gov. Greg Abbott signed a resolution designating Jasper the Butterfly Capital of Texas.

Though millions of monarchs will fly through East Texas en route to their winter grounds in Central Mexico, their numbers have dropped from a billion in their heyday to about 33 million in 2014-or more than 80 percent since the mid-1990s, according to the U.S. Fish and Wildlife Service. All the more reason to pay attention to these beautiful insects.

So on **OCTOBER 20**, people and butterflies are welcomed on the Jasper County Courthouse square for the FALL BUTTERFLY FESTIVAL. In addition to arts and crafts, food vendors and live entertainment, monarch education will be the order of the day.

TECH KNOWLEDGE

ANTICIPATING **POWER LINE PROBLEMS**

Bluebonnet Electric Cooperative's control center recently dispatched a crew to replace a faulty clamp on a section of electric line along a remote road. No one reported a power outage, but the co-op knew about the clamp thanks to a new monitoring technology called distribution fault anticipation.

Falling limbs and switch arcing cause measurable changes in line current and voltage. DFA detects and reports such changes, allowing co-ops to find and fix these situations before they cause problems. including wildfires. Power line events caused more than 4.000 wildfires in Texas in one threeyear period alone, according to the Texas A&M Forest Service.

Texas A&M engineers developed DFA, and Bluebonnet and Pedernales ECs and Mid-South Svnergy participated in a multiyear demonstration of the technology. Bluebonnet now has DFA devices on 24 feeder lines.

"This technology helps us increase safety and reliability," says Will Holford, Bluebonnet EC manager of public affairs. "If we had not known about that clamp that needed to be replaced, the consequences could have been significant. We're always looking for ways to improve the health of our feeders and mitigate the threat of wildfires."

HONORS

Don't Mess With Texas Chicks

Two chicks from Texas were among 10 finalists earlier this year in Purina Animal Nutrition's national contest to name the Strongest Chick in America. Jennifer Lampkin from Big Sandy and Laura Vaile Gariner from Hockley entered photos of their chicks, and voting on Facebook earned them a spot among the finalists. A chick from Michigan named Rosaleen won the contest.

HISTORY LESSON

Plow Know-How

THIS MONTH marks the 175th anniversary of the birth of Ole Ringness in Norway. Ringness, a mail carrier after his family settled in Bosque County, invented the disc plow and disc harrow after noticing how a warped wheel on his wagon moved large amounts of mud.

HE MADE MODELS of a disc plow in his father's blacksmith shop but never had his invention patented. In July 1872, as he journeyed to Washington, D.C., to present his case for a patent, he died under mysterious circumstances. Ringness apparently had reached the patent office because it later

contacted his family to say his patent had been approved and would be granted upon payment of a fee. The family declined the offer, so Ringness never received credit for the invention. Similar farm equipment was later patented by a plow company.

Did you know?

WORTH REPEATING

"The people love their co-ops, and they stay close to it just like a community."

-STATE SEN. ROBERT NICHOLS

of Jacksonville, during a Senate Committee on Business and Commerce hearing in May about the electric utility industry; October is National Cooperative Month.

SPORTS SECTION

UP FOR DISCUSSION

Raise your hand if you know the significance of the Astros' last game of the season 41 years ago. Hopefully somebody will come along and high-five you.

The celebratory gesture is said to have started in Los Angeles at that game, October 2, 1977, when Dusty Baker of the Dodgers homered off Houston pitcher J.R. Richard. Teammate Glenn Burke raised his hand to greet Baker as he touched home plate, and Baker reached up and slapped Burke's hand. That is believed to be the first high-five.

HORE THAN EEGERICITY

THROUGH PROGRAMS AND PROJECTS, CO-OPS PROVE

'THEY ARE THE FABRIC OF THE COMMUNITY'

BY CHARLES LOHRMANN

ohn Wied, a member of Fayette Electric Cooperative in La Grange since 1981, serves on the board of Hospice Brazos Valley, and he looks to the co-op to support the specialty health care provider. "We have our fundraiser in Round Top in August," he says, "and I can always count on Fayette EC for a donation."

But the true significance of the co-op's role in the community goes much deeper than any of its individual contributions to service organizations, Wied says. "They are the fabric of the community," he explains. "If you tried to pull it up and go away, a lot of people would go with it. They don't just support the community—they are the community."

Community involvement—along with local management—is what makes today's electric cooperatives special in the eyes of their members. Recent research conducted on behalf of the National Rural Electric Cooperative Association reports that one of the essential reasons members value co-ops is that they are local. "Community is the core co-op advantage that connects with consumers," NRECA reports.

Since their creation in the 1930s, Texas' 67 electric distribution co-ops have served rural and suburban areas. In those early years, investor-owned utilities were not willing to extend electric service beyond cities and towns because it was not profitable. Then came the Rural Electrification Administration, a federal program that helped cooperatives finance their own electric systems.

As Wied said of Fayette EC, they don't just serve the community—they are the community. Kevin Houchin, a member of Heart of Texas Electric Cooperative in McGregor, echoes the sentiment, "Co-op employees are the little league coaches; they are the Sunday school teachers."

In local communities and in foreign countries, improving lives is the co-op way.

Magic Valley Electric Cooperative supports United Way of South Texas' back-to-school program. Volunteer Evelyn López helps Marely Quintanilla of Edinburg shop at a McAllen Target store.

n the Rio Grande Valley, Magic Valley Electric Cooperative in Mercedes assists a range of nonprofit organizations. Thelma Garza, president of United Way of South Texas, which serves Hidalgo and Starr counties, explains that Magic Valley EC "is a very strong supporter of our United Way, not just in payroll deductions for employee contributions but also in volunteer work."

"They help with training other volunteers," she says, "and they support the calendar we mail out to 45,000 people. People see the Magic Valley logo, and they know the co-op is engaged with people.

"We need as many as 200 volunteers for our back-to-school program, when we give 120 eighth-graders and freshmen a \$150 Target gift card to buy school supplies," Garza explains. "Even though the school gives them a shopping list, the volunteers help the students make better choices. Some of those students have never had the opportunity to shop for themselves.

"We also have a program called Loaned Executive, in which someone in mid management becomes an extension of the United Way staff for 12 weeks during our campaign, "Garza says. "These people meet with major employers and make what we call the

"THEY DON'T JUST SUPPORT THE Community— They <u>Are</u> the Community."

midnight presentations at hospital shift changes—or even at 3 a.m., when UPS has a shift change."

Abraham Quiroga, business and employee development division manager at Magic Valley EC, has taken part in the Loaned Executive program twice. "The biggest benefit of the program," Quiroga says, "is learning about the organizations that United Way supports. Many people rely on those social services, and they meet real human needs."

In Central Texas, Houchin retired from the McGregor Independent School District after 31 years, including 17 as superintendent. "Heart of Texas Electric Cooperative provided the energy for most of our schools," he says, "and they were a great community partner.

"They were always available to help," Houchin says, "even with something as simple as coming to dig the hole when someone donated a tree to honor a loved one. Or they would put up the decorations downtown."

Heart of Texas EC is one of the many co-ops around the state that participate in Operation Round Up, a program in which members can round up their monthly bills to the next whole dollar to support their co-op's charitable work. "Through their Round Up program," Houchin explains, "Heart of Texas is able to provide grants to all kinds of nonprofits. Money is tight, and a \$2,500 grant for a volunteer fire department makes a big difference."

Houchin also lauds the co-op in its basic role as energy provider. "They were always competitive pricewise," he says, "and they kept us up to date with what was happening. If something needed to be fixed, they fixed it. They were a great community partner."

In Denton County, Janet Shelton has been impressed by the community involvement of CoServ, an electric co-op based in Corinth, and the CoServ Foundation. "I've been involved with the Denton Public School Foundation," she says, "and CoServ has been very generous with their grants to support innovative classroom activity." Shelton's praise does not stop there.

"I was on the board of an organization called Hearts for Homes that provided home repairs for elderly residents who could not afford to make the repairs themselves. CoServ not only gave us money but sent volunteer crews to help complete the repairs."

One more thing: "I was involved with the Denton Community Theater," she adds, "and CoServ gave us a grant to purchase headphones for the hearing-impaired. So, you could say that CoServ supports schools, social services and the arts."

RPUED

VOLUNTEERS

ven though electric co-ops are known for community involvement, their primary business always will be fulfilling the basic need for reliable electricity. Every co-op is part of the complex infrastructure of the state's electric grid. In some cases, even the co-op's power generation component has a community function. As renewable energy technologies are incorporated into community generation projects, co-ops are making renewable resources accessible to members—to help the planet. In March, United Cooperative Services in Cleburne activated an installation of 44,340 solar panels in Bosque County that can generate up to 9.9 megawatts. The co-op's members can subscribe to the power with no upfront costs and no contract.

Concern for Community, one of the Seven Cooperative Principles, extends to management, too. As one member put it, "When our power goes out, their power goes out, too." As Wied says, "They're not in New York, looking out from the 75th floor."

Often, the most visible co-op personnel are lineworkers, who are on the job at all hours of the day and night, working to

keep the lights on. In the aftermath of ice storms, thunderstorms, tornadoes, wildfires, floods and other disasters, lineworkers are among the first responders and sometimes don't get to go home for days at a time.

WEB EXTRAS ► Read this story online to see more examples of how co-ops support their communities.

The framework by which co-ops support one another is called a mutual-aid agreement. After Hurri-

cane Harvey's 130 mph winds tore out electric service for more than 175,000 meters in 15 co-op service territories, co-ops from across the state, including as far away as the Panhandle, sent line crews to restore power. Jimmie Scott, a lineworker for Jackson Electric Cooperative, did not miss a day of work restoring power to Jackson EC members, even though the roof

Members know they can count caved in on the house he inherited from his father.

Inspired by the stories of service and sacrifice, members of Mecklenburg Electric Cooperative, based in Chase City, Virginia,

"CO-OP EMPLOYEES ARE THE LITTLE LEAGUE COACHES; THEY ARE THE SUNDAY SCHOOL TEACHERS."

figuratively joined hands to support Texas co-ops. Employees, along with local schools and community groups, filled a semitrailer with cleaning and restoration supplies, water, and handwritten messages of support. The truck and driver, provided by a co-op member, made the 1,300-mile trip to Victoria Electric Cooperative, which distributed supplies along the coast.

People along the coast still are recovering from the damage of Harvey, even a year after it blasted Texas. This spring, the Sinton Little League asked San Patricio Electric Cooperative for help in replacing seven light poles that were damaged during the storm. Even though the ballpark does not receive electric service from San Patricio EC, the co-op covered the cost of the new poles. A group of 21 co-op employees, led by Alex Torres and Joe Cruz, repainted the ballpark's concession stand, replaced an unsafe staircase, fixed up its roof and added more power outlets.

Lineworkers take seriously the responsibility of serving their communities, even when they are not on the job. Four lineworkers from Tri-County Electric Cooperative encountered a fiery, multivehicle collision on Interstate 35 on their way to lunch one day in May 2017. They took action immediately, removing victims from their vehicles and providing first aid, including spinal immobilization, until medics arrived. Their lifesaving efforts took on even more immediacy as a fire caused by the initial collision spread to a cargo trailer filled with paint cans, causing explosions that accelerated the blaze.

Every community in Co-op Country tells similar stories of generosity and support. Many who collaborate with the co-ops share the sentiment of CoServ member Shelton, who says, "I'm just impressed."

Charles Lohrmann is the Texas Co-op Power editor.

on co-ops to serve young peo-

ple, stay on top of trends in the

industry and help get them through disasters.

THE SEVEN COOPERATIVE PRINCIPLES

Cooperative business entities around the world adhere to the Seven Cooperative Principles originally formulated in the 1840s in England. The principles have endured to this day and are a testament to the sustainability of the cooperative business model.

I Voluntary and open membership

Cooperatives are voluntary organizations open to all persons able to use their services and willing to accept the responsibilities of membership, without gender, social, racial, political or religious discrimination.

DEMOCRATIC MEMBER CONTROL

Cooperatives are democratic organizations controlled by their members, who actively participate in setting policies and making decisions. The elected representatives are accountable to the membership. In primary cooperatives, members have equal voting rights (one member, one vote), and cooperatives at other levels are organized in a democratic manner.

MEMBERS' ECONOMIC PARTICIPATION

Members contribute equitably to, and democratically control, the capital of their cooperative. At least part of that capital is usually the common property of the cooperative. Members usually receive limited compensation, if any, on capital subscribed as a condition of membership. Members allocate surpluses for any or all of the following purposes: developing the cooperative, possibly by setting up reserves, part of which at least would be indivisible; benefiting members in proportion to their transactions with the cooperative; and supporting other activities approved by the membership. 4

AUTONOMY AND INDEPENDENCE

Cooperatives are autonomous, self-help organizations controlled by their members. If they enter into agreements with other organizations, including governments, or raise capital from external sources, they do so on terms that ensure democratic control by their members and maintain their cooperative autonomy.

5

EDUCATION, TRAINING AND INFORMATION

Cooperatives provide education and training for their members, elected representatives, managers and employees so that they can contribute effectively to the development of their cooperatives. They inform the general public, particularly young people and opinion leaders, about the nature and benefits of cooperation.

D Cooperation Among Cooperatives

Cooperatives serve their members most effectively and strengthen the cooperative movement by working together through local, national, regional and international structures.

CONCERN FOR COMMUNITY

While focusing on member needs, cooperatives work for the sustainable development of their communities through policies accepted by their members.

ADVANCED HEARING AID TECHNOLOGY For 82.2% Less*

"I have been amazed... by the quality of the sound and the improvement in my life." — Wayne S., Sharon, CT

How can a hearing aid that costs 82.2% less be every bit as good as one that sells for \$3,000 or more?

The answer: Although tremendous strides have been made in Advanced Hearing Aid Technology, those cost reductions have not been passed on to you. Until now...

MDHearingAid[®] uses the same kind of Advanced Hearing Aid Technology incorporated into hearing aids that cost thousands more at a small fraction of the price.

Over 300,000 satisfied MDHearingAid customers agree: High-quality, FDA-registered hearing aids don't have to cost a fortune. The fact is. you don't need to spend thousands for a hearing aid. MDHearingAid is a medical-grade hearing aid offering sophistication and high performance, and works right out of the box with no time-consuming "adjustment" appointments. You can contact a licensed hearing specialist conveniently online or by phone — even after your purchase at no cost. No other company provides such extensive

support. Now that you know ... why pay more?

DOCTOR DESIGNED | AUDIOLOGIST TESTED | FDA REGISTERED

*82.2% less when comparing MDHearingAid AIR to the average price of a mid-level hearing aid of \$2,250, according to a survey recently published by the *Hearing Review*.

Can a Hearing Aid Delay or Prevent Alzheimer's and Dementia?

A study by the National Institute on Aging suggests older individuals with hearing loss are significantly more likely to develop Alzheimer's and dementia over time than those who retain their hearing. They suggest that an intervention — such as a hearing aid — could delay or prevent this by improving hearing!

TAKE ADVANTAGE OF OUR 45-DAY RISK-FREE TRIAL!

Hearing is believing and we invite you to try this nearly invisible hearing aid with no annoying whistling or background noise for yourself. If you are not completely satisfied with your MDHearingAid, return it within 45 days for a **FULL REFUND.**

Trinity Valley Electric Cooperative

Coping With Mother Nature

MESSAGE FROM GENERAL MANAGER/CEO JERRY BOZE

WE STRIVE TO PROVIDE YOU WITH THE MOST RELIABLE electric service possible. We work with the best technology available, perform regular maintenance and

train our employees to spot system hazards.

Still, Mother Nature throws us some curves from time to time. Lightning, ice storms, fires, floods and tornadoes are just a few of the formidable challenges our highly qualified technicians face.

Tree limbs bent or blown over during harsh weather are a regular concern. Even

animals can be a problem. Squirrels, snakes, turkey vultures, ants, woodpeckers and other critters can cause interruptions when they come in contact with electric equipment.

Here are just some of the measures we take to keep interruptions to a minimum:

• Crews regularly trim tree branches along distribution lines.

► Lightning arresters on transformers direct lightning safely to the ground.

► Wildlife guards and insulated cables keep animals safe from transformers. Electric fences keep raccoons and snakes out of substations. Providing uninterrupted

power during times of peak load is a major priority, so your co-op chooses wire sizes and transformers that can handle the job. We install fuses, sectionalizers and reclosers to minimize areas of interruption. In addition, multiple ground connections help protect the system, equipment and the general public.

If an interruption does occur, technologies such as supervisory control and data acquisition systems automatically locate outages, which minimizes the time linemen must spend physically searching for obstructions to lines. They can go directly to the location of the problem and get the line or transformer repaired more quickly than ever before.

These are just some of the ways your co-op is working to provide electric service you can count on.

Statistics Per

Other Electric Utilities Number of consumers served:

i i i i i Revenue: **\$79,000**

Going the Extra Mile

Did you know electric cooperatives maintain more miles of power lines per consumer and acquire less revenue than other types of electric utilities?

Even though they serve fewer consumers and acquire less revenue (per mile of line), electric co-ops always go the extra mile, maintaining a tried-and-true record of delivering safe, reliable electric service to the members they serve.

Fall Home Maintenance and Prep

FINALLY, TEMPERATURES ARE AT

least hinting at cooling, foliage is edging closer to its glorious reveal, and football is on TV. That means leaves are falling or will be soon. Here are some practical steps you can take to get your home in tiptop shape for autumn.

Outdoors

Clear gutters and downspouts of leaves and debris. Also, consider installing gutter guards to help minimize the job next time.

Trim dead limbs and branches from trees to prevent them from falling and causing damage to your house or car during winter storms that may come.

Lower humidity during fall makes for prime painting time. If you've been putting off an exterior house-painting job, this could be an opportune time to get around to it.

Take a close look at your roof. Check for signs of wear and tear, including any misshapen, cracked or missing shingles. Damaged shingles should be replaced, and if there is significant damage to the roof overall, it may be time to consider replacing the whole thing.

Check flashing around skylights, chimneys and pipes, and seal any leaks or gaps with roofing cement.

If doing any of the above necessitates a ladder, observe the following practices:

▶ Place the ladder's base on a firm, dry surface.

► Wear slip-resistant shoes.

► Always keep three points of contact with the ladder: two hands and one foot or two feet and one hand.

- ► Don't stand higher than the third rung from the top.
- ▶ Don't lean or overreach—reposition the ladder instead.

▶ Be sure to check for and avoid any overhead power lines before climbing a ladder.

Once back on solid ground, rake or blow leaves from your lawn to avoid insects and prevent suffocating the grass below. The raked leaves make an excellent nutrient-rich mulch, or you can compost them.

One last task outdoors in anticipation of colder, potentially freezing winter temperatures: Wrap exposed water pipes with heating tape. The benefits of this are twofold—It will save energy and keep your pipes from freezing.

Indoors

Clean or replace filters in your heating, ventilation and air conditioning system.

Check your attic for proper insulation and make sure there's enough. The insulation's vapor barrier should face down toward your home's interior. If more insulation is needed, install it on the attic's floor between joists, taking care not to step off the joists.

If there isn't one already, consider installing a screen behind any gable vents that lead into your home's attic to discourage pests from taking up residence there.

Weatherstrip doors and windows with vinyl, felt, foam tape or rubber to seal any drafty areas. Finish the job with a metal sweep along the bottom of the door. For an easier alternative to the door sweep, go with a removable draft guard. It's also wise to repair caulking around window and door frames. According to the U.S. Department of Energy, sealing an old or especially drafty house can save more than 20 percent on heating and cooling bills, so this is a worthwhile practice to maintain year-round.

Have wood-burning fireplaces inspected and cleaned to prevent chimney fires and carbon monoxide poisoning.

Test smoke alarms and carbon monoxide detectors and replace batteries as needed. If you don't own a CO detector, get one. Relatively inexpensive models can save lives.

Put these tips into action to make your home a safe and comfortable sanctuary for you and your family.

Trinity Valley Electric Cooperative

Downed and Dangerous

DOWNED POWER LINES CAN BE DEADLY. ALWAYS ASSUME A DOWNED POWER LINE IS energized and avoid going near it and anything in contact with it.

Use Caution

- Downed power lines can energize the ground up to 35 feet away.
- If you see a downed power line, immediately notify local authorities.
- Never drive over downed power lines or through water that is in contact with them.
- Never try to move a downed power line. Even using items that typically are not conductive will not protect you from injury or death.

Know What To Do

- The safe way to move away from a downed power line is to shuffle away with small steps, keeping your feet together and on the ground at all times.
- ▶ If your car comes in contact with a downed power line while you are inside, stay in the car. Do not touch any part of the car's frame or any other metal. Use a cellphone or honk your horn to summon help. Allow only rescue personnel to approach the car.

If your car is in contact with a downed power line and you must exit due to fire or another imminent threat:

- ▶ Do not touch your vehicle and the ground at the same time with any part of your body or clothing.
- Open the door to your vehicle without touching the metal door frame.
- Jump out of the vehicle with both feet together and such that both feet land at the same time.
- Shuffle away keeping both feet close together and always touching the ground.
- ▶ If someone comes in contact with a downed power line or something else that has become electrified, call 911 immediately.
- ▶ Never touch someone who has come in contact with a power line. They are energized and pose a danger to anyone who comes in contact with them.

Remember, power lines don't have to fall to be dangerous. Always call 811 before digging and keep yourself and your equipment at least 10 feet from overhead lines.

Pocket Change Effects Positive Change

SMALL GOOD DEEDS PERFORMED BY

many individuals can have a big impact. We see examples of this everywhere, from crowdsourced fundraising campaigns to reducing carbon emissions.

The value of one person's contribution is multiplied when that same action is taken by many.

Trinity Valley Electric Cooperative's Operation Round Up program is your chance to pay it forward in that same impactful way. When you participate in Operation Round Up, your co-op literally and figuratively rounds up your spare change to help people in need. If your electric bill is \$97.65, for example, it would be rounded up to \$98, with 35 cents donated to Operation Round Up that month. In a year, that might add up to \$6 or so, which probably sounds insignificant, until you multiply that amount by the number of members who participate.

The TVEC Charitable Foundation uses the funds collected from Operation Round Up to benefit community organizations like food banks, volunteer fire departments and other groups. Can you think of a better way to spend a handful of change each month? Neither can we.

Thank you for helping to support our community in partnership with TVEC.

Together we make a big difference.

HVAC Maintenance Guide

Get your ducts in a row

YOUR HOME'S HEATING AND COOLING SYSTEMS HELP KEEP YOU COMFORTABLE DURING

oppressive heat and bitter cold, but they must be properly maintained to do so. Be aware of warning signs of potential problems and follow maintenance guidelines to ensure your HVAC system is operating safely and efficiently.

Don't Get Burned: Signs of Potential Problems

- ▶ Your energy bill goes up without increased use.
- > The system makes strange sounds, such as clunking or knocking.
- Air in your home is too humid or too dry.
- Certain areas of your home are noticeably hotter or colder than others.
- ▶ An HVAC breaker keeps tripping.
- If your furnace is more than 15 years old or if your air conditioner is more than 10 years old, it may be time for a replacement.

If you observe any of these warning signs, have a certified HVAC specialist check out your system.

Keep Your Cool: Upkeep and Maintenance

- Make sure fuel-burning heating equipment is vented to the outside without obstruction. 60127243001
- ▶ Replace HVAC filters at least every 90 days.
- ▶ Keep intake and output vents clean and clear of debris and dust.
- Have your heating and air conditioning systems inspected by a qualified service professional at least once a year to make sure they are running at optimal efficiency and to diagnose any potential problems.
- Some heating appliances may produce carbon monoxide, a deadly gas that is tasteless, colorless and odorless. Protect your home with CO alarms and test them monthly to ensure they are working properly.

Is Your Neighbor Stealing From You?

EVERY YEAR, TRINITY VALLEY ELECTRIC

Cooperative copes with thieves—folks who deliberately tamper with their electric meters to steal power. Not only is this practice extremely dangerous, it's a serious crime that can result in hefty fines and jail time.

According to the Cooperative Research Network, power surging through a compromised meter can cause an electrical catastrophe.

A short circuit could produce an arc flash bright enough to cause blindness and powerful enough to launch fragments of shrapnel-like, red-hot debris. Serious injury or death from electrocution, explosion or fire often results from meter tampering. Only trained co-op personnel wearing protective clothing should work on meters.

Electricity theft has several victims.

The co-op loses revenue and expends resources to investigate tampering.

Co-op members pay more for the power they use to cover the cost of the stolen electricity.

And, most importantly, co-op personnel, members and the thief can be seriously injured when the meter's safety features are compromised.

Anyone witnessing or aware of someone tampering with an electric meter should contact TVEC immediately.

TEXAS DIVISION OF EMERGENCY MANAGEMENT

Hurricane Preparedness Guidelines

Preparing for Hurricane Season: June 1-November 30

EVACUATION PLANNING: When a hurricane threatens, listen for instructions from local officials. When they call for an evacuation in your area, get going without delay.

► Discuss evacuation plans with your family before hurricane season, June 1– November 30. Make a checklist of what you need to do before you leave town and review it.

▶ Monitor NOAA Weather Radio, local TV and radio broadcasts during storm season.

► Prepare an emergency supply kit including a radio, flashlight, extra batteries, extra eyeglasses, bottled water, nonperishable food, dry clothes, bedding, insurance information, important documents, medications, copies of prescriptions and special products for babies, seniors, medically fragile family members and pets.

► Learn evacuation routes before storm season. When there's a hurricane in the Gulf, keep your gas tank as full as possible. Expect traffic delays in an evacuation.

► Register with the State of Texas Emergency Assistance Registry online at stear. dps.texas.gov or dial 211 to register if you have a disability or medical needs, or if you simply do not have transportation. Gulf Coast residents in evacuation zones who have a disability or medical needs who do not have friends or family to help or do not have transportation should register with STEAR in advance.

DIVISIÓN DE ADMINISTRACIÓN DE EMERGENCIAS DE TEXAS

Directrices para Huracanes

Preparando para la temporada de huracanes durante el 1 de junio hasta el 30 de noviembre

EVACUACIÓN EN CASO DE HURACÁN: Cuándo exista una amenaza de huracán, escucha las instrucciones de funcionarios locales. Cuando llamen para una evacuación en su área, sálgase del área lo más pronto posible.

► Discute los planes de evacuación con su familia antes de la temporada de huracán, que comienza el 1 de junio hasta 30 de noviembre. Haga una lista de lo que usted debe hacer antes de salir de la ciudad y revísela.

Escuche la radio y televisión durante la temporada de huracanes.

► Prepare un equipo de emergencia incluyendo radio, linterna, repuesto de baterías, anteojos extras, agua embotellada, alimentos no perecederos, ropa extra, ropa de cama, información de seguro, documentos importantes, medicinas, copias de recetas medicas y productos especiales para bebés, las personas mayores, miembros de la familia médicamente frágiles y animales domesticos.

► Aprenda sus rutas de evacuación antes de la temporada de huracanes. Cuando hay un huracán en el Golfo, mantenga el tanque de gasolina lleno. Este consiente de que habrá demoras de tráfico.

Puede registrese con el State of Texas Emergency Assistance Registry vía su sitio web: stear.dps.texas.gov o llamando al 211 para registrarse si usted tiene una discapacidad o necesidades médicas o si simplemente no tiene transporte. Los residentes de la Costa del Golfo en zonas de evacuación con una discapacidad o necesidades médicas quiénes no tienen amigos o familiares para ayudarle o no tienen transporte debe registrarse con STEAR por adelantado.

Win \$25 Just for Reading

Somewhere, hidden on Pages 18–23, is a TVEC account number. Read closely. If the account number is yours, contact the Member Services Department by October 31 to receive a \$25 credit on your electric bill. Don't miss out—you could be a winner!

Advocacy Center Supports Kids and Families

Balancing justice, hope and healing is the mission of the Children's Advocacy Center of Van Zandt County. It is just one of more than 70 such advocacy centers in Texas and 200 nationwide, part of a larger effort to protect young victims from revictimization by the adult criminal justice system. In 2017, 256 child abuse investigations came through the center.

"We are the ones who provide the services to the family members and the children," said Kevin King, CACVZC executive director. "Once a child is interviewed, we offer family members the opportunity to have counseling, parenting groups, teen groups, and other advocacy resources the family may need."

Located in Canton, the center houses forensic services, family advocacy, therapeutic services, community education services and business/administrative services. The center opened in 2004, working alongside Texas Child Protective Services

Kevin King, Kindelle Scott, Robin Sherwood and Jourdan Lathem accept an Operation Round Up grant from TVEC PR Representative Kari Wilmeth.

Children's Advocacy Center of Van Zandt County \$3,000 and law enforcement to provide forensic interviews for children referred to the center after possible abuse, neglect or as witnesses to crime. The center provides a facility and expert help as a bridge between the child and the prosecution team while providing a safe, child-friendly environment. The goal is promoting the mental stability and healing for children, without compromising the integrity of investigations by law enforcement and CPS.

One of the center's biggest challenges is educating the public about the services it offers and how much work they do.

"Because the county is so spread out and us being centrally located in Canton, people in Fruitvale or Ben Wheeler or farther out, don't really know what the resources are or how to access them," King said.

Volunteers are key to success in spreading the word, as well as helping with the families at the center.

"It also helps to have smiling faces when the kids come in, to try to have it more child-friendly, because there is nothing scarier for these kids than coming into a place that they are unsure about," King said.

Find more information about the center and becoming a volunteer at cacvz.org.

THE TVEC CHARITABLE FOUNDATION recently awarded four grants totaling \$11,000. Recipients of the grants include the above and:

Isaiah 40:31 Foundation \$1.000

\$1,000

The Isaiah 40:13 Foundation supports individuals after lifealtering tragic accidents or medical diagnoses.

Forney Education Foundation \$2,000

The Forney Education Foundation provides grants for innovative education opportunities in Forney ISD and scholarships for graduating seniors.

A. Fern Norville Foundation/Kaufman County Children's Shelter \$5,000

The A. Fern Norville Center has provided for the needs of abused and neglected children since 1985. The facility houses and cares for children of all ages, meeting a high demand for keeping sibling groups together.

Founded in 2013, the TVEC Charitable Foundation is an independent, nonprofit organization. The foundation was created to serve the community and help improve the quality of life for residents in our service area. **The foundation is funded entirely by donations from TVEC members who participate in Operation Round Up.** For more information, please call 1-800-766-9576 or visit tvec.net.

ADVERTISEMENT **Leading Acid Reflux Pill Becomes an Anti-Aging Phenomenon**

Clinical studies show breakthrough acid reflux treatment also helps maintain vital health and helps protect users from the serious conditions that accompany aging such as fatigue and poor cardiovascular health

by David Waxman Seattle Washington:

A clinical study on a leading acid reflux pill shows that its key ingredient relieves digestive symptoms while suppressing the inflammation that contributes to premature aging in men and women.

And, if consumer sales are any indication of a product's effectiveness, this 'acid reflux pill turned anti-aging phenomenon' is nothing short of a miracle.

Sold under the brand name AloeCure, it was already backed by clinical data documenting its ability to provide all day and night relief from heartburn, acid reflux, constipation, irritable bowel, gas, bloating, and more.

But soon doctors started reporting some incredible results...

"With AloeCure, my patients started reporting less joint pain, more energy, better sleep, stronger immune systems... even less stress and better skin, hair, and nails" explains Dr. Liza Leal; a leading integrative health specialist and company spokesperson.

AloeCure contains an active ingredient that helps improve digestion by acting as a natural acid-buffer that improves the pH balance of your stomach.

Scientists now believe that this acid imbalance is what contributes to painful inflammation throughout the rest of the body.

The daily allowance of AloeCure has shown to calm this inflammation which is why AloeCure is so effective.

Relieving other stressful symptoms related to GI health like pain, bloating, fatigue, cramping, constipation, diarrhea, heartburn, and nausea.

Now, backed with new clinical studies, Aloe-Cure is being recommended by doctors everywhere to help improve digestion, calm painful inflammation, soothe joint pain, and even reduce the appearance of wrinkles - helping patients to look and feel decades younger.

FIX YOUR GUT & FIGHT INFLAMMATION

Since hitting the market, sales for AloeCure have taken off and there are some very good reasons why.

To start, the clinical studies have been impressive. Participants taking the active ingredient in AloeCure saw a stunning 100% improvement in digestive symptoms, which includes fast and lasting relief from reflux.

Users also experienced higher energy levels and endurance, relief from chronic discomfort and

skin, hair, and nails.

A healthy gut is the key to a reducing swelling and inflammation that can wreak havoc on the human body. Doctors say this is why AloeCure works on so many aspects of your health.

AloeCure's active ingredient is made from the healing compound found in Aloe vera. It is both safe and healthy. There are also no known side effects

Scientists believe that it helps improve digestive and immune health by acting as a natural acid-buffer that improves the pH balance of your stomach.

Research has shown that this acid imbalance contributes to painful inflammation throughout your entire body and is why AloeCure seems to be so effective.

EXCITING RESULTS FROM PATIENTS

To date over 5 million bottles of AloeCure have been sold, and the community seeking non-pharma therapy for their GI health continues to grow.

According to Dr. Leal, her patients are absolutely thrilled with their results and are often shocked by how fast it works.

"For the first time in years, they are free from concerns about their digestion and almost every other aspect of their health," says Dr. Leal, "and I recommend it to everyone who wants to improve GI health without resorting to drugs, surgery, or OTC medications.³

"I was always in 'indigestion hell.' Doctors put me on all sorts of antacid remedies. Nothing worked. Dr. Leal recommended I try AloeCure. And something remarkable happened... Not only were all the issues I had with my stomach gone completely gone - but I felt less joint pain and I was able to actually sleep through the night.'

With so much positive feedback, it's easy to see why the community of believers is growing and sales for the new pill are soaring.

THE SCIENCE BEHIND ALOECURE

AloeCure is a pill that's taken just once daily. The pill is small. Easy to swallow. There are no harmful side effects and it does not require a prescription.

The active ingredient is a rare Aloe Vera component known as acemannan.

Made from of 100% organic Aloe Vera, AloeCure uses a proprietary process that results in the highest quality, most bio-available levels of acemannan known to exist.

According to Dr. Leal and several of her colleagues, improving the pH balance of your stomach

better sleep. Some even reported healthier looking and restoring gut health is the key to revitalizing your entire body.

> When your digestive system isn't healthy, it causes unwanted stress on your immune system, which results in inflammation in the rest of the body.

> The recommended daily allowance of acemannan in AloeCure has been proven to support digestive health, and calm painful inflammation without side effects or drugs.

> This would explain why so many users are experiencing impressive results so quickly.

REVITALIZE YOUR ENTIRE BODY

With daily use, AloeCure helps users look and feel decades younger and defend against some of the painful inflammation that accompanies aging and can make life hard.

By buffering stomach acid and restoring gut health, AloeCure calms painful inflammation and will help improve digestion... soothe aching joints... reduce the appearance of wrinkles and help restore hair and nails... manage cholesterol and oxidative stress... and improve sleep and brain function ... without side effects or expense.

You can now reclaim your energy, vitality, and youth regardless of age or current level of health.

One AloeCure Capsule Daily

- Helps End Digestion Nightmares
- Helps Calm Painful Inflammation
- Soothes Stiff & Aching Joints
- Reduces Appearance of Wrinkles & Increases Elasticity
- Manages Cholesterol & Oxidative Stress
- Supports Healthy Immune System
- Improves Sleep & Brain Function

HOW TO GET ALOECURE

This is the official nationwide release of the new AloeCure pill in the United States. And so, the company is offering you up to 3 FREE bottles with your order.

All you have to do is call TOLL-FREE 1-800-808-5114 and provide the operator with the Free Bottle Approval Code: AC100. The company will do the rest.

Important: Due to AloeCure's recent media exposure, phone lines are often busy. If you call and do not immediately get through, please be patient and call back.

THESE STATEMENTS HAVE NOT BEEN EVALUATED BY THE FOOD AND DRUG ADMINISTRATION. THIS PRODUCT IS NOT INTENDED TO DIAGNOSE, TREAT, CURE, OR PREVENT ANY DISEASE. ALL DOCTORS MENTIONED ARE REMUNERATED FOR THEIR SERVICES. ALL CLINICAL STUDIES ON ALOECURE'S ACTIVE INGREDIENT WERE INDEPENDENTLY CONDUCTED AND WERE NOT SPONSORED BY THE AMERICAN GLOBAL HEALTH GROUP.

"The quality of their watches is equal to many that can go for ten times the price or more." — Jeff from McKinney, TX

"Blue face watches are on the discerning gentleman's 'watch list'." - watchtime.com

STONE COLD FOX

ANC HNI

PPG

DENCH

So good-looking...heads will turn. So unbelievably-priced...jaws will drop.

Every once in a while a timepiece comes along that's so incredibly good looking, masterfully equipped and jaw-droppingly priced, that it stops us stone cold. A watch that can take you seamlessly from the 18th hole to the board room. A watch that blurs the line betweens sports watch and dress watch. We're talking the *Blue Stone Chronograph*, and it sits at the top of the discerning gentleman's watch list.

Striking in appearance and fully equipped with features, this is a watch of substance. The *Blue Stone* merges the durability of steel with the precision of crystal movement that's accurate to 0.2 seconds a day. Both an analog and digital watch, the *Blue Stone* keeps time with pinpoint accuracy in two time zones.

The watch's handsome steel blue dial seamlessly blends an analog watch face with a stylish digital display. It's a stopwatch, calendar, and alarm. Plus, the *Blue Stone* resists water up to 30 meters, making it up for water adventures.

A watch with these features would easily cost you thousands if you shopped big names. But overcharging to justify an inflated brand name makes us blue in the face. Which is why we make superior looking and performing timepieces priced to please. Decades of experience in engineering enables Stauer to put quality on your wrist and keep your money in your pocket. Your satisfaction is 100% guaranteed. Experience the *Blue Stone Chronograph* for 30 days. If you're not convinced you got excellence for less, send it back for a refund of the item price.

Time is running out. Originally priced at \$395, the *Blue Stone Chronograph* was already generating buzz among watch connoisseurs, but with the price slashed to **\$69**, we can't guarantee this limited-edition timepiece will last. So, call today!

Bass Reeves, Lawman Extraordinaire

Could the West's first African-American deputy marshal have inspired the Lone Ranger?

BY CLAY COPPEDGE

BASS REEVES CAME TO TEXAS FROM Arkansas as an enslaved 8-year-old with the William Reeves family in 1846. He would go on to become the first African-American U.S. deputy marshal west of the Mississippi and among the most relentless lawmen of his or any day.

When William's son, George, went to fight for the Confederacy during the Civil War, Bass was sent along with him. At some point, Bass lit out for Indian Territory (present-day Oklahoma) and never encountered the Reeves family again.

Bass Reeves found refuge in Indian Territory with the Seminole, Creek and other tribes and later bought land near Van Buren, Arkansas. He married Nellie Jennings, a Texas girl, in 1864 and grew crops, raised livestock and reared five boys and five girls.

In 1875, President Ulysses S. Grant ordered Judge Isaac C. Parker to bring law and order to Indian Territory. Parker authorized the hiring of 200 deputy marshals, and Reeves, an occasional scout and guide for deputy marshals, was one of them. Reeves was big (6 feet, 2 inches) and already a legendary marksman, and he knew the country.

Reeves also turned out to be dedicated and fearless. He worked for 32 years as a U.S. deputy marshal and reportedly brought to justice 3,000 felons, all but 14 of them alive.

Art T. Burton, author of the 2006 biography *Black Gun, Silver Star: The Life and Legend of Frontier Marshal Bass Reeves,* isn't sure about that 3,000 number, even though it came from Reeves himself in a 1902 interview. Even so, Burton found

many newspaper accounts of Reeves bringing in a dozen or more desperados at a time.

Burton's lifelong fascination with Reeves began when he was 11. He saw a movie about Wyatt Earp and asked his grandfather if there were any black marshals in the Old West. "There was one," his grandfather told him. "His name was Bass Reeves." Burton sought out family members and others who were around during the marshal's heyday and listened to oftenfantastic and nearly always unverifiable stories about Reeves. But once retired as a history professor, he got to wondering if some of the stories might be true, which led him to write the biography.

"He was the baddest of the bad," Burton says. "He was an expert with a rifle and a pistol. And if you were hiding, he would find you."

Reeves operated, Burton says, without fear or favor, arresting the minister who baptized him for selling illegal liquor and even his own son, Bennie, for killing his wife. It's hard to compare him to anybody, except maybe the Lone Ranger. And Burton does make that comparison.

Burton notes that U.S. marshals work-

ing in the region at that time, including Reeves, routinely hired Native Americans to work with them, and he found instances of Reeves repaying strangers for their kindness and hospitality with silver dollars. Perhaps that compares to how the Lone Ranger handed out silver bullets to verify his identity.

The original Lone Ranger wore a black mask, and Burton found several accounts of Reeves using disguises to capture bad guys. Many of the desperados Reeves arrested were sentenced to prison in Detroit, where *The Lone Ranger* radio show originated.

While Burton readily admits there is no conclusive evidence to support the notion that Reeves was the prototype for the Lone Ranger, he believes that Reeves "is the closest real person to resemble the fictional Lone Ranger that we have."

Of course, there's also the possibility that the creators of the radio show just made up the character. But Reeves was the real deal. He died in 1910, but, oddly, no one knows where he's buried.

Burton believes he's still in disguise.

Writer Clay Coppedge is the author of Forgot-

ten Tales of Texas (The History Press, 2011).

The Great Pumpkin

'TIS THE SEASON WHEN ALL THINGS pumpkin flavor our lattes, cookies, quick breads and more. No complaints here-the subtly sweet richness of pumpkin gives everything from soups to muffins a luscious texture and comforting, even nostalgic appeal. When I heard Ruth Reichl, the former editor of Gourmet magazine, describe the following recipe, I knew I had to give it a try. A small whole pumpkin (sometimes called a sugar or pie pumpkin) is layered with toasted bread and cheese; filled with cream, chicken stock and a few aromatics; and baked until the filling melds with the tender pumpkin flesh. Delight friends and family by serving the whole baked pumpkin at the table, then carve it into quarters. PAULA DISBROWE, FOOD EDITOR

Stuffed Pumpkin

- 1 small pumpkin (about 4 pounds)
- 1 loaf French bread (such as baguette), cubed (about 6 cups)
- 12 ounces grated cheese (such as Gruyère, Swiss, Emmenthal or sharp white cheddar)
- 1 tablespoon chopped fresh thyme or sage
- 1 cup chicken stock
- 1 cup heavy cream

1 teaspoon kosher salt Freshly ground black pepper Pinch grated nutmeg Pinch cayenne Vegetable oil, for brushing

 Preheat oven to 350 degrees.
 Slice off the top of the pumpkin (as though you were making a jacko'-lantern) and use a metal spoon to scrape out the seeds and strings. (Spread the seeds out to dry and eat later.)

3. Place the bread cubes on a rimmed baking sheet and bake until lightly toasted, about 9 minutes.

The Great Pumpkin

THIS MONTH'S RECIPE CONTEST WINNER

MARI HALEY | CENTRAL TEXAS EC

Haley's swoonworthy riff on flan has a subtle, appealing pumpkin flavor that melds perfectly with its caramelized syrup. With a silky texture that's slightly more substantial than traditional versions, the flan makes for a pie

stand-in on Thanksgiving. Haley says it's also a "great dessert for a Mexican-themed dinner" and "really complements a Cajun-spiced turkey."

Family Style Pumpkin Flan

CARAMEL

1 cup sugar

CUSTARD

- 5 eggs, at room temperature
- 1 cup sweetened condensed milk
- 1 can (15 ounces) pumpkin purée (not pumpkin pie filling)
- 1/2 teaspoon ground cinnamon
- 1/4 teaspoon ground ginger
- 1/4 teaspoon ground nutmeg
- 1 teaspoon vanilla extract
- 3/4 cup whole milk

1. Preheat oven to 350 degrees with the rack in the middle of the oven.

2. CARAMEL: Pour the sugar into a small, heavy-bottomed saucepan and place over low heat, stirring constantly until the sugar melts into a golden liquid. Carefully pour the hot, caramelized sugar into an 8-inch metal (not glass) cake pan and allow to cool completely.

3. CUSTARD: Beat the eggs with an electric mixer at low speed until combined (do not whip the eggs into foam). Add the sweetened condensed milk, pumpkin, cinnamon, ginger, nutmeg and vanilla and mix at low speed just until evenly combined. Add the milk and beat at low speed

\$100 Recipe Contest

March's theme is **Winner, Winner, Chicken Dinner**. Roasted? Stewed? Fried until crisp? What's the word on your best bird? The deadline to submit a recipe is **October 10**.

IF YOUR RECIPE IS FEATURED, YOU'LL WIN A TEXAS CO-OP POWER APRON!

ENTER ONLINE at TexasCoopPower.com/contests; MAIL to 1122 Colorado St., 24th Floor, Austin, TX 78701; FAX to (512) 763-3401. Include your name, address and phone number, plus your co-op and the name of the contest you are entering. until well-blended (do not overbeat). **4.** Place the cake pan in a larger pan (like a lasagna pan), then pour the egg mixture into the cake pan over the cooled caramelized sugar. Carefully pour hot water into the lasagna pan until it reaches about 2/3 up the side of the cake pan to create a water bath, then place combined pans in oven. 5. Bake 50 minutes or until the flan is firm to the touch but not solid. (To double-check for doneness, insert a knife into the center and about halfway down into the flan-the knife should come out clean.) Remove the pans from the oven and carefully remove the cake pan from the water bath. Allow the cake pan to cool on counter, then cover with plastic wrap and refrigerate at least one day or up to two days.

6. When you're ready to serve, run a table knife around the side of the cake pan to release the flan. Place a deep serving plate on top of the cake pan and, while holding the plate and pan tightly together, invert. The caramel will run down the sides of the flan. Serve in wedges or large spoonfuls, topped with a sprinkle of cinnamon if desired. ► Serves 6–8.

Remove from oven and cool slightly. **4.** Layer the bread and cheese inside the pumpkin, leaving about 1/2 inch at the top (the filling will expand a bit during baking).

5. In a medium bowl, whisk together the fresh herbs, chicken stock, cream, salt, black pepper, nutmeg and cayenne. Pour the mixture into the pumpkin, using as much as you need to cover the top layer of filling. Place the top back on the pumpkin, brush the outside with oil, then bake on a rimmed baking sheet 2 hours, until the pumpkin is very tender.
6. Allow the pumpkin to cool 10–15 minutes, then slice it into quarters. Make sure you scoop up the pumpkin flesh with the bread and cheese mixture.
> Serves 4.

Pumpkin Chocolate Chip Muffins

KELLY LASTER | PEDERNALES EC

You can use regular or mini chocolate chips in these easy-to-love muffins (they're perfect for school parties or potlucks). "Our children used to ask to bring these to school on their birthdays to share with their classmates instead of cupcakes," Laster says. "It's been a family favorite recipe for the last 20 years."

- 4 eggs
- 2 cups sugar
- 1 can (15 ounces) pumpkin purée
- 11/2 cups vegetable oil
- 3 cups flour
- 2 teaspoons baking soda
- 2 teaspoons baking powder
- 1 teaspoon ground cinnamon
- 1 teaspoon salt
- 2 cups semisweet chocolate chips

1. Preheat oven to 400 degrees and apply nonstick spray to 2 muffin pans (or line them with paper cups).

2. In a large mixing bowl, beat the eggs, sugar, pumpkin and oil until smooth. In a separate bowl, whisk together the flour, baking soda, baking powder, cinnamon and salt. Stir the dry ingredients into the pumpkin mixture until just combined, then fold in chocolate chips.

3. Fill the muffin indents about 3⁄4 full, then bake 16–20 minutes or until golden and a toothpick inserted in the center of a muffin comes out clean. Remove from

heat and cool the muffins in pans 10 minutes before transferring them to a wire rack to cool completely. ► Makes 24 muffins.

Curried Pumpkin Soup With Cilantro Chutney

JANET ROSE | SAN BERNARD EC

We love the creative, exotic spin on this silky soup. Curry, bright orange juice and a cilantro chutney pair beautifully with the sweetness of pumpkin. "This soup can be served hot or cold," Rose writes, "and can be made with any winter squash in place of the pumpkin. You can also use canned pumpkin purée."

SOUP

- 2 tablespoons butter
- 1 cup chopped onion
- 1/2 cup chopped shallots
- 1 clove garlic, chopped
- 6 cups cubed fresh pumpkin (about a 4-pound pumpkin)
- 1 tart apple (preferably Granny Smith), peeled, cored and chopped
- 4 cups chicken broth
- 1 cup orange juice (preferably fresh)

- 2 tablespoons curry powder
- 1 teaspoon minced fresh dill
- 1 teaspoon grated orange zest
- 1 cup heavy cream
- Salt and pepper to taste

CILANTRO CHUTNEY

- 2 cups fresh cilantro (leaves and tender stems)
- 1/2 yellow pepper, diced
- 1 hot chile (preferably red), seeded and chopped
- 1/4 cup roasted sunflower seeds
- $\frac{1}{2}$ teaspoon roasted cumin seeds
- 1 teaspoon orange juice

1. SOUP: Melt the butter in a large saucepan (or Dutch oven) over medium heat. When the butter has melted, add the onion, shallots and garlic and cook, stirring, until the vegetables are softened (but not brown), about 5–7 minutes. Add the pumpkin, apple, chicken broth, orange juice, curry powder, dill and orange zest. Bring the mixture to a boil, then lower heat and simmer about 40

minutes, until the pumpkin is very soft. **2.** Remove the soup from heat and allow to cool briefly, then purée the mixture in a blender or food processor (in batches if necessary). Return the purée to the pot, stir in the heavy cream, season to taste with salt and pepper and rewarm, if necessary, but do not allow the soup to boil.

3. CHUTNEY: Combine all the ingredients in a food processor or blender and process into a coarse purée. Add additional sunflower seeds if the chutney is too thin. Serve immediately, or cover with plastic wrap and store in the refrigerator up to one day in advance.

4. To serve the soup, ladle it into bowls and garnish with a spoonful of the cilantro chutney. ► Serves 6–8.

COOK'S TIP For a thicker texture, drain the pumpkin before puréeing, reserving the liquid, then add enough broth to create the consistency desired. This soup has a bright citrus flavor—to tone it down, use ½ cup orange juice and an additional ½ cup chicken broth.

Go With the Flow

A visit to the Laredo Water Museum is an immersion in the wonders of the Rio Grande

BY EILEEN MATTEI

BATHED IN BLUE LIGHT, A TOILET ON A pedestal offers the first clue that the Laredo Water Museum takes a humorous approach to a serious topic.

"The Water Museum is about appreciating the importance of water and keeping the water supply safe," says Wes Barbarena, plant operations supervisor of Laredo's Jefferson Water Treatment Plant.

Why does the museum display a toilet on a pedestal? Because one-third of water used in homes goes down the toilet. With exhibits such as that one, the city of Laredo's Water Treatment Division hopes visitors will grasp the connection between water demand and the environment.

Visitors like me soak up information in arcadelike interactive exhibits, complete with blinking lights and joysticks. A hands-on immersion in water, so to speak, makes a difference, says Maria Romo, museum project specialist. "Teachers tell me they like that the kids learn while looking and playing. It helps them remember and make connections to lessons in class. Kids tell me they will come back with their brothers and sisters to have fun here and learn about water."

At the museum entrance, a wall of bubbles shows water use facts such as the number of gallons of water needed to produce a vehicle, a pair of jeans or a cup of coffee. A terrazzo map invites me to walk along a scale model of the 1,900-mile-long Rio Grande, allowing me a bird's-eye view to explore its watersheds and tributaries.

Inside the 30-foot-long Water Treatment Tunnel (a simulated 72-inch diameter water pipe where dim blue lights create the illusion of a watery atmosphere), I travel with water on its journey from the muddy Rio Grande to clear potability. Motion-activated, action-packed

One of the interactive displays at the Laredo Water Museum. videos on each side of me explain the sixstage process (disinfecting, clumping, agifiltering, and under-

tating, purifying, filtering and underground storage). This process treats as many as 48 million gallons daily.

In the main exhibit hall, the Water World pool illustrates how currents move plastics and trash around the ocean. At Water and You, I step on a scale, and flashing lights show how many gallons of water I tote around daily. Humans are, after all, 60–75 percent water. One station challenges you to guess how much water you use at home for bathing and washing clothes and dishes. Other kiosks focus on agriculture, drought and wastewater.

And that blue toilet? The display recommends using low-flow or dual-use toilets along with a blue dye test kit to find if your toilet leaks. Conservation suggestions include low-controlled aerosol faucets that reduce water use up to 50 percent along with xeriscaping and rainwater harvesting.

At a station labeled What You Can't See in Water, a giant, simulated petri dish

reveals squiggles, clumps and bubbles moving in water. I navigate the microscope-joystick through magnified parasites, bacteria and water contaminants.

Romo says students like to pump water by hand into a 5-gallon container, feeling the energy it takes. They can learn more about the almost 800 million people worldwide who do not have access to clean water and sometimes risk waterborne illnesses like cholera, typhoid and amoebic dysentery. "Kids see the impact of polluting on the river, the environment, and want to stop it," she adds.

Outside, a nature trail edged with Turk's cap, cenizo, yucca, skeleton-leaf goldeneye and tropical sage slopes down to the Rio Grande. The lush and colorful native plants require minimal water and attract green jays, scissortail flycatchers and countless butterflies.

The multisensory message is easy to absorb: Take good care of our water.

Eileen Mattei, a Nueces EC member, is a Texas master naturalist in Harlingen.
