A Touchstone Energy® Cooperative 🔨

INTRODUCING THE NEW INTERNATIONAL CV\_SER

To take your business to the next level, you need a truck designed by commercial truck experts who know it takes a rugged, versatile, and driver-focused truck to step up your game. With a rear-view camera to keep you aware of the work area, you'll stay safer on the job. You'll also gain access to dedicated diesel technicians and expert salespeople at North America's largest commercial dealer support network. It's time to grow your business with the new International® CV™ Series - a truck that's built for what's next.

Visit InternationalTrucks.com/CVTRUCK for more information.

#### No Concept of Electricity

Reading about your 75th anniversary made me think of a story my father told me when I was a kid.

Just before World War II. when they were electrifying rural western Louisiana, my father was a foreman for Brown & Root Construction. One day, he was in a small town near the Louisiana-Texas border, finishing up checking out a new substation. A group of the townspeople approached him, and one man stepped forward and said, "We hear we are going to get electric lights soon."

Dad responded with, "That's right. As soon as I am finished here, I will radio the crew over in the next town and they will turn on the power."

With that, the man asked, "How long will it take to get here?"

Dad said, "It will be here as soon as they turn it on."

Without another word, they all turned and walked away. thinking my father was making fun of them. He said he never forgot the look on the man's face as he turned away.

Today, we take electricity for granted. It's hard to imagine a time when there were those who had no concept of it. JACK L. TYLER | ARLINGTON PEDERNALES EC

#### **Hungry Mockingbirds**

Feedin' Time [Focus on Texas. June 2019] has a photograph of a nest of unidentified baby birds. Fittingly, they are the Texas state bird-northern mockingbird (Mimus polvalottos). RAY C. TELFAIR II, CERTIFIED WILDLIFE **BIOLOGIST** | WHITEHOUSE CHEROKEE COUNTY EC

#### **Drive-In Dating**

I dated during the late '40s and early '50s. The drive-in theater was where, on Saturday night, they only charged \$5 for a carload of people [Drive In, Chill Out, June 2019]. Saw many a movie there over the years.

#### HAPPENINGS

## Fayette County Fair

Josh Turner and Casey Donahew are the headliners August 31 at the FAYETTE COUNTY FAIR, which runs AUGUST 29-SEPTEMBER I in La Grange.

"If you have never seen our River View music venue, for our top entertainment, you're missing some of the best sunset views of Central Texas," says Michael Zuhn, a Fayette Electric Cooperative member and president of the fair, which calls itself "The Best Little Fair in Texas."

The first Fayette County fair was in 1927. Last year, about 9,000 fairgoers came through the gates. The theme for 2019 is For the Kid in All of Us. Indeed, youths are a top priority: The fair awards 20 academic scholarships of \$1,000 each and another \$5,000 in scholarships to contestants in the fair queen pageant.

#### HISTORY LESSON

#### PEACEMAKER TURNS DEADLY

**175 years ago**, in 1844, President John Tyler, who made Texas statehood a focus of his time in office, celebrated with more than 400 guests aboard the USS Princeton after a milestone annexation treaty. The newly built boat's "peacemaker" gun at the time the largest naval gun in the world—was showing off its power when a misfire killed six and injured several others.

Among the dead were Abel P. Upshur, secretary of state, and Thomas Walker Gilmer, secretary of the navy—wellknown names in northeast Texas—who worked alongside Tyler to admit Texas as a slave state. All three were outspoken supporters of slavery.

**Incredibly**, two of Tyler's grandsons, Lyon Gardiner Tyler Jr., born in 1924, and Harrison Ruffin Tyler, born in 1928, are still alive today.

#### LOOKING BACK AT RURAL LIFE THIS MONTH

SINCE 1944, the year *Texas Co-op Power* debuted, rural Texas has faced unprecedented droughts, benefited from advancements in farm equipment and celebrated red grapefruit.

#### 1940s

**1945** An estimated 3.2 million pecan trees make Texas one

of the nation's leading pecan producers.

**1945** The farm-to-market road system comes into being.

**1948** A Colorado farmer invents the center pivot irrigation machine, which revolutionizes irrigation farming.

#### 1950s

**1950** Stihl unveils the first one-person, gasoline-powered chain saw.

**1950** Texas' rural population falls below 50% for the first time—to 37.3%.

**1954** Social Security coverage is extended to farm operators.

**1957** Texas' historic seven-year drought ends; the state loses nearly 100,000 farms and ranches in the 1950s.

#### 1960s

**1960** International Harvester launches the Cub Cadet as the first lawn and garden tractor produced by a major tractor manufacturer.

**1965** Mohair output in Texas reaches a peak when ranchers clip 31.6 million pounds from 4.6 million Angora goats.

FERRIS WHEEL: BART BROWNE. PECANS: NEIL LOCKHART | DREAMSTIME.COM. ANGORA GOAT: ERIC ISSELEE | SHUTTERSTOCK.COM

#### <sup>MUSICAL NOTES</sup> Texans Rock Woodstock

**FIFTY YEARS AGO**, 31 bands and more than 400,000 people turned a dairy farm in upstate New York into the site of the legendary Woodstock music festival. At least four of the musicians to play during the concert, August 15–18, 1969, were Texans: Janis Joplin of Port Arthur; Johnny Winter, with his brother Edgar, both of Beaumont; and Sly Stone of Denton from Sly and the Family Stone.

Two weeks later, the same Texas artists were among some two dozen bands at the Texas International Pop Festival, which drew upward of 150,000 to Lewisville, where CoServ, an electric cooperative in Corinth, has many members. That concert, August 30–September 1, was at the Dallas International Motor Speedway, which was demolished in 1973.

#### WORTH REPEATING

*"If men can run the world, why can't they stop wearing neckties? How intelligent is it to start the day by tying a little noose around your neck?"* 

-LINDA ELLERBEE, an American TV journalist most known for her work at NBC News and Nickelodeon, who turns 75. She was born August 15, 1944, in Bryan.

#### BY THE NUMBERS

August is National Eye Exam Month, and the Vision Council says about 75% of adults use some sort of vision correction.

#### MILESTONE BIRTHDAY

#### **No Candles, Please**

**Smokey Bear turns 75** this month. On August 9, 1944, he debuted as fire prevention spokesman for the U.S. Forest Service. He is part of the longest-running public service advertising campaign in U.S. history.

**Chances are** he wouldn't approve of 75 candles burning on his birthday cake.

#### 1970s

**1970** Geneticist Norman Borlaug receives a Nobel Peace Prize for developing highyielding, diseaseresistant wheat.

**1977** Members and supporters of the Texas Farm Workers Union march 420 miles from San Juan, in the Rio Grande Valley, to Austin in support of fieldworkers' right to vote on union representation.

#### 1980s

**1980** John Deere produces a four-row cotton picker, the first in the industry, and estimates the unit will increase operators' productivity 85%–95%.

**1984** Texas researcher Richard Hensz develops the Rio Red grapefruit.

**1989** The Native American Seed Company is founded in Argyle. It moved to Junction in 1995.

#### 1990s

**1993** The Legislature designates Texas red grapefruit as the official

1994 Farmers begin using GPS to aid use of water, fertilizer and pesticides.

**1995** Texas voters approve Proposition 11, which allows land used to manage wildlife to qualify for tax appraisals in the same manner as agricultural land.

#### LOOKING BACK AT TRAVEL NEXT MONTH >

#### 2000s

**2012** Texas leads the nation with 248,800 farms and ranches—far fewer than the 420,000 that existed in 1940.

**2017** The Hill Country ranks second in wine tourism after Napa Valley. Texas' wine industry boosts the state's economy by \$13.1 billion and supports more than 104,000 jobs.

## A Commitment to Quality of Life

#### **ILLUSTRATIONS BY DAVID VOGIN**

ince July 1944, *Texas Co-op Power* has been a trusted voice for Texas electric cooperatives, bolstering a movement to light up rural areas and tell the stories of people who live there. The magazine's mission to empower rural communities has been the constant behind the headlines.

Following World War II, *Texas Co-op Power* fought for the very existence of electric cooperatives and the Rural Electrification Administration. The headlines reflected the intensity of the battle: *Phony Campaign Aimed at Co-ops* or *Utility Lobby Unveils Its Power Grab Plan*.

In the '40s and '50s, the magazine amplified the voices of farm families disenfranchised from electric power, countering outlandish charges that co-op members were communists or that nonmembers were taxed to support rural electricity.

The co-ops' life-or-death struggle with investor-owned utilities evolved into community building through shared information. The magazine's focus shifted to optimizing the opportunities offered by electricity and answering questions about new appliances for the recently electrified farm.

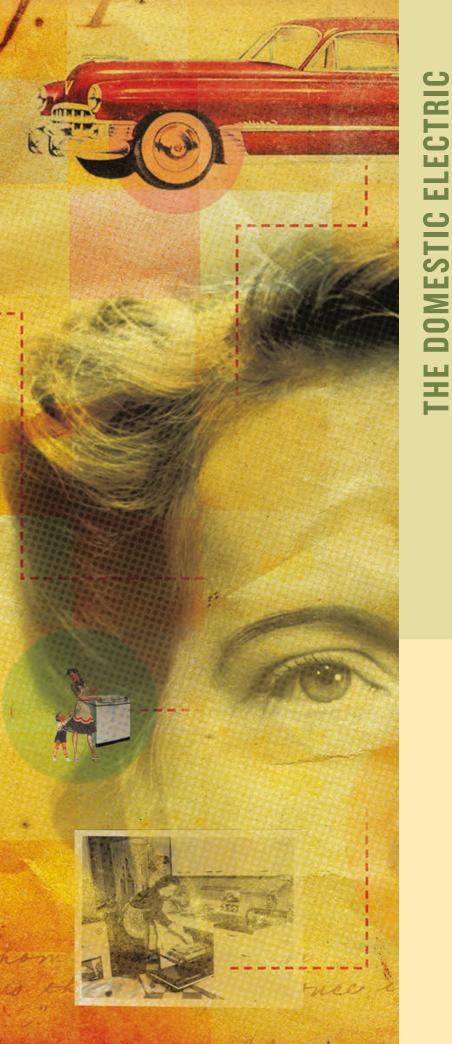

The magazine set its sights on identifying challenges and outlining solutions, whether it was describing the home of the future or simply explaining how to use a waffle iron. And not all policy talk was about power. One 1982 article outlined a tough forecast for agriculture, noting that, in 1981, a bushel of corn that sold for \$2.40 cost a farmer \$3.11 to produce.

Rural Texans are not as isolated now as they were in the days before electricity. Yet, *Texas Co-op Power* remains a valued resource for understanding the fundamental changes technology brings.

For our 75th anniversary, we reflect on the magazine's work to educate readers on the benefits the cooperative model affords to shine a light on the fruits of cooperation. Whether it was the glow of a homestead's first lightbulb or the gentle hum of a modern family's new electric vehicle, *Texas Co-op Power* explained these advances. And when the next mystifying technology inserts itself into your life, we'll be there, too.

#### **BY CHARLES LOHRMANN | EDITOR**

n the 1930s and 1940s, power lines newly installed across the countryside didn't just deliver light. As the once-quixotic prospect of an electrified rural home became a reality, the electricity the lines carried ultimately delivered families from the drudgery of onerous, timeconsuming chores that many urban residents had already dispensed with. Quotidian routines could be accomplished faster and with less tedium, and tasks that once were tethered to the sun's schedule could now be completed under a lightbulb's glow.

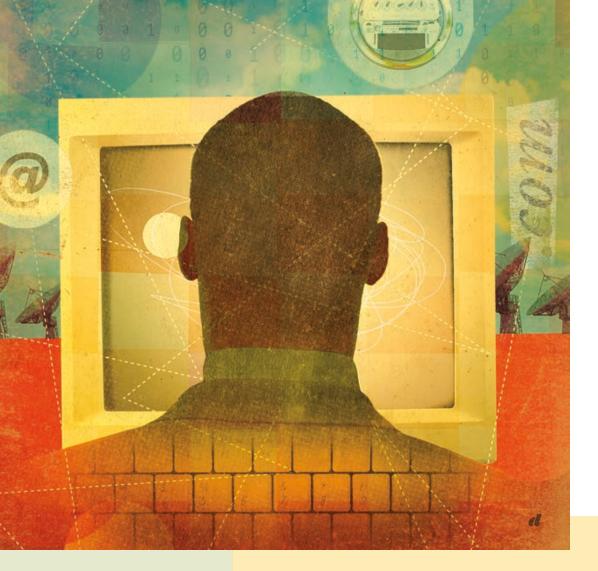

Amid this development, *Texas Co-op Power* consistently advocated readers' parity with urban dwellers. As the November 1944 issue asserted, "New or old, the farm home that has high-line electric service easily can and should have as modern a kitchen as any found in the most up-to-date city residence." That story detailed the timesaving benefits of an electric range, refrigerator and dishwasher while also cautioning readers to proceed sensibly. Noting that the expense of a modern kitchen could be financed, the magazine offered an alternative for readers loath to take on consumer debt: "You can install it piece by piece as your income permits."

The Cranek family, members of Wharton County Electric Cooperative, took advantage of this convenience. Before getting an electric range in 1943, Mrs. L.V. Cranek cooked on a wood stove, and in July 1951, she told *Texas Co-op Power* that the range was "just like a dream in comparison." The homemaker didn't mince words when she summed up the difference electric light and appliances made: "Before rural electrification the farm was no pleasant place to live."

From its earliest days, *Texas Co-op Power* has provided safety tips and practical guidance to help readers derive the greatest value from the life-changing innovations rural Americans had for so long gone without. In particular, thrift achieved through timely maintenance has been a refrain. "Major repairs, or replacements, can often be avoided by proper care of your appliances and by making minor repairs," the August 1950 issue advised. "By these preventative measures, you can realize the fullest efficiency, value, and longevity from household tools."

It's advice that has stood the test of time just like this magazine.

**BY JESSICA RIDGE | COMMUNICATIONS SPECIALIST** 

et's face it. The digital age has been hard slogging for those of us raised during the typewriter age. I am happy to say that *Texas Co-op Power* has been helping educate us about digital technology since the '70s.

The earliest tech reports dealt mainly with the billing process. Readers later learned of electronic meter-reading technology, cooperative-provided satellite TV, computer programs designed to simplify and quantify farm and ranch operations, and software that could digitally monitor entire electrical systems. I particularly enjoyed a 1986 column titled Memo From Mary explaining how new "cellular telephones" allowed you to "make a telephone call from anywhere, your car, the beach, or from a picnic table." What a wonder.

Co-ops worked hard in the '90s to help rural areas keep up. For example, Fayette Electric Cooperative helped organize a Texas Rural Internet Conference. Many co-ops developed internet services and created their own digital homepages with practical advice about all things electrical. Co-ops pushed to get rural school libraries and hospitals wired.

A handy new column named Dot.com Corner was born in 2000, the year I went to work for the magazine. In 2001, I wrote a story called *Cyberspace Country*, for which I visited co-op members Don and Diane Harmeier, who had been able to get a dedicated T1 phone line, enabling them to operate a software company on their ranch 8 miles outside Kerrville. It was 50 times faster than the commonly available dial-up service.

*Texas Co-op Power* and local cooperatives vigorously advocated and frequently provided greater communications services for co-op members such as the Harmeiers. Today, most members speed confidently along the information highway. But many rural Texans still can't get fast fiber-optic internet like I have in Austin because it requires digging underground and laying cable at great expense. Google just offered my neighborhood Fiber 1000, which can download a high-definition movie in 43 seconds. But, co-op folks, be consoled by how far service has come. In 2001, when I was checking what rural areas could get, it took many long hours to download just a short video on a dial-up connection. Stream on.

BY KAYE NORTHCOTT | EDITOR 2001-2010

few miles west of Marfa, along state Highway 90, is a delightful art installation celebrating the iconic movie *Giant*, a larger-than-life celebration of the mythic Texas oil industry. The '50s classic, starring Elizabeth Taylor, Rock Hudson and James Dean, was filmed on a nearby ranch.

What we don't have, but should, is a movie celebrating the unsung efforts of those scientists, engineers, technicians and, yes, electric co-op professionals who have been working to harness the wind, sun and other renewables. Flip through the past 40 years of *Texas Co-op Power*, and you won't find material for a modern-day Taylor-Hudson love story—though when I was editor, we staged a James Dean look-alike cover —but you will find articles chronicling efforts to find alternatives to fossil fuels. It's an ongoing story of the exotic becoming the everyday.

In 1971, the talk was of electric tractors. In 1978, it was a solar satellite that would beam electricity back to earth by microwave. *Texas Co-op Power* reported in 1980 that Sen. James McClure of Idaho foresaw electric cars dominating American highways by 2000. The senator's prediction was a bit optimistic, and yet other "experimental" efforts the magazine explored have gone mainstream.

Near Tulia, in 1979, a wind turbine located on a Swisher Electric Cooperative member's farm was help-

ing irrigate corn and grain sorghum fields. In 1980, Lighthouse Electric Cooperative was involved in a solar "power tower" project to help meet the power needs of Crosbyton. The power tower used the sun's energy to produce steam, which drove a conventional turbine.

Also in 1980, Elton McGinnes, manager of Southwest Texas Electric Cooperative in Eldorado, told *TCP* about a geothermal resources committee that was overseeing probes into the earth in search of temperatures high enough to generate electricity.

In 2004, *Texas Co-op Power* proclaimed the West Texas town of McCamey the "wind energy capital of Texas." The magazine reported that hundreds of "monolithic metal giants with threepronged blades" had brought renewed prosperity. "The wind power source will never be capped. There will always be potential," Walt Hornaday of Cielo Wind Power enthused.

The magazine also quoted a United Nations study concluding that Texas had more renewable energy in wind, solar and biomass than any other state.

Can't you just see it? Today's Rock Hudson and Elizabeth Taylor—George Clooney maybe? Jennifer Lopez?—standing on the porch of their rambling solar-powered ranch house and staring contentedly into the distance at giant, white windmills, blades turning in the West Texas breeze, producing energy forever renewed. And the new James Dean to play Jett Rink? Maybe he plays a poultry farmer, relying on the West Texas sun to keep his birds warm and healthy.

BY JOE HOLLEY | EDITOR 1998-2000

#### VEHICLES OF THE HEREAFTER

he future, it seems, is a fickle friend. It always gets here faster than expected, yet it ever lingers as some distant dream. Our high-tech way of life has changed more radically than we could have imagined 25 years ago—but we still are not zipping around through time and space like the folks on *The Jetsons*.

Back in 1893, the *Abilene Reporter* noted distant rumblings of "an important change in the method of municipal transport." Stages or carriages, the paper observed, might soon move London's populace about by means of electric power. "Storage batteries are to be used. No one ... will deny that the perfection of the storage battery will make this possible."

By the time *Texas Co-op Power* came along, the internal combustion engine had long displaced such electro-transport visions as the German Elektrowagen. More recently, as scientists warn of the dangers of climate change, the electric vehicle has returned as an alternative. And the magazine has been riding shotgun to report the news.

In 1998, the magazine reported on the development of the Toyota Prius, "the world's first mass-produced hybrid-electric passenger car that doubles the efficiency and halves the emissions of a comparable conventional car." The following year, then-editor Joe Holley explained that the Prius used both electric power and a gasoline engine, with an onboard computer that "automatically switches" between them or utilizes a combination of the two.

Today, drivers can choose from dozens of hybrid and all-electric vehicles. As *Texas Co-op Power* noted in 2010, "By 2040, 75 percent of the light-duty vehicle miles traveled in the U.S. should be electrically powered."

Another futuristic gizmo, the drone, has acquired the problematic reputation of being flown dangerously close to commercial airliners. Yet as the magazine reported in 2017, Pedernales Electric Cooperative linemen deployed the remote control quadcopters to repair lines after the Blanco River flooded in 2015, restoring power in hours instead of days.

George and Jane Jetson, we're catchin' up at *Texas Co-op Power*.

#### BY GENE FOWLER | TEXAS CO-OP POWER CONTRIBUTOR

# SMART LIFE

am a technophobe. I'm doing well to operate a cellphone and a laptop. So I wondered, how did I end up writing about high-tech "smart life" for this 75th anniversary issue of *Texas Co-op Power*? Then I remembered a story I wrote for the magazine back in 2011: *High-Tech Co-ops Changing Energy Realities*. I visited five co-ops across the state where the introduction of new technology made a significant difference to co-op members. Some were seeing the benefits of the "smart grid," while others were enjoying making their own energy with the help of the wind, and still others were monitoring their energy consumption at home from their personal computers.

The story was not an abstract, speculative treatise on technology. This was real life with real people. The co-op staff and members I met showed me how technology, rather than being intimidating, was something that could make life easier by saving time and money.

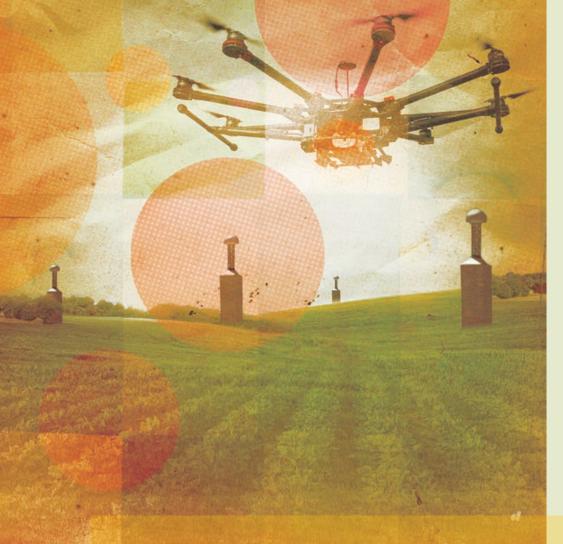

Looking back over 75 years, it is clear that co-ops were on the forefront of high-tech developments such as the "smart house," a concept introduced back in 1987 in *Texas Co-op Power* and actually constructed with co-op sponsorship in 1993.

Remember when there was no internet? No tweets? No electronic meter reading? All of which are taken for granted now. The internet alone has altered life with its seemingly infinite capability to deliver information, from the price of hog bellies on the stock exchange to how to make the perfect mac 'n' cheese. You've already heard about the "internet of things" in the pages of *Texas Co-op Power*, and you're sure to hear more as cloud-based apps further enable communication between your smartphone and appliances and electronic systems in your home.

Not only does *Texas Co-op Power* inform readers about new technologies on the horizon, it helps you understand how they work and what the benefits will be. The magazine can fill that role because it's a trusted voice and echoes the sentiments of a general manager who once said, "Before we adopt any technology, we look at how it will make us more efficient and benefit our members."

So maybe I'm really not afraid of high tech, after all. I just need a little *TCP* TLC.

BY CAROL MOCZYGEMBA | LONGTIME STAFF MEMBER AND EXECUTIVE EDITOR 2007–2013

# THE FUTURE NOW

he robotic assistants and flying cars promised by the golden age of science fiction still haven't materialized in Texas' homes and garages, but plenty of seemingly sci-fi technologies have. This next generation of tech—the culmination of decades of advances in biotechnology, computer sciences, nanotechnology and engineering—exists mostly in labs and in the cloud (or clouds). But some of it is already starting to show its potential for our everyday lives. The future is now.

For decades, farmers have envisioned a time when automation could put some of their workload in the hands of machines—Willie Wiredhand instead of Willie farmhand. In January 1971, Dick Pence, *Texas Co-op Power's* Washington correspondent, wrote about such visions: "The research quest for new machines and instruments has produced some exotic-sounding ideas ... electric-powered laser beams to control the depth of laying drainage pipe; computer-controlled feeding; electrostatic separation of seeds during cleaning processes; portable sensors to measure how much water plants lose during growth; and dozens of other devices."

But even Pence likely couldn't have imagined how drones equipped with powerful infrared cameras, automation software and GPS tracking could be used to monitor crops from the air without the farmer ever having to get up from his desk. In April 2017, *Texas Co-op Power* wrote about that technology, which Juan Landivar, Corpus Christi director for the Texas A&M AgriLife Research and Extension Center, told us was still a few years away from commercial viability.

Such technologies have the power to revolutionize agribusiness. Other tech promises to change the way Texans do business, travel, interact and, well, live. That's why we've got our eye on advancements such as 5G wireless technology, which may one day make broadband obsolete with its superior wireless connection speeds. And artificial intelligence promises to one day drive our cars for us, produce works of art and defend our skies.

Then there's wireless electricity. Long dreamed about, it already exists today in the form of wireless pads that charge cellphones, for example. Researchers are looking to apply that concept on a much larger scale. An oddly shaped tower with a metal ball at its peak, along Interstate 35 East in Ellis County, is part of one such study, run by scientists at Viziv. Their goal is the wireless transmission of electricity over large distances.

"The Viziv surface wave systems will improve the quality of life for people everywhere by enabling the delivery of affordable electricity throughout the world," the company's website reads.

If they're ever successful, rest assured, we'll let you know.

## "To you, it's the perfect lift chair. To me, it's the best sleep chair l've ever had."

— J. Fitzgerald, VA

**NEW** Footrest Extension for even more head to toe support.

Sit up, lie down and anywhere in between!

We've all had nights when we just can't lie down in bed and sleep, whether it's from heartburn, cardiac problems, hip or back aches – it could be a variety of reasons. Those are the nights we'd give anything for a comfortable chair to sleep in, one that reclines to exactly the right degree, raises feet and legs to precisely the desired level, supports the head and shoulders properly, operates easily even in the dead of night, and sends a hopeful sleeper right off to dreamland.

Our Perfect Sleep Chair<sup>®</sup> is just the chair to do it all. It's a chair, true – the finest of lift chairs – but this chair is so much more! It's designed to provide total comfort and relaxation not found in other chairs. It can't be beat for comfortable, long-term sitting, TV viewing, relaxed reclining and – yes! – peaceful sleep.

Our chair's recline technology allows you to pause the chair in an infinite number of positions, including the lay flay position and the zero gravity position where your body experiences a minimum of internal and external stresses. You'll love the other benefits, too: It helps with correct spinal alignment, promotes back pressure relief, and encourages

This lift chair puts you safely on your feet!

better posture to prevent back and muscle pain.

## Easy-to-use remote for massage, heat, recline and lift

And there's more! The overstuffed, oversized biscuit style back and unique seat design will cradle you in comfort. Generously filled, wide armrests provide enhanced arm support when sitting or reclining. The high and low heat settings along with the multiple massage settings, can provide a soothing relaxation you might get at a spa – just imagine getting all that in a lift chair! It even has a battery backup in case of a power outage. Shipping charge includes white glove delivery. Professionals will deliver the chair to the exact spot in your home where you want it, unpack it, inspect it, test it, position it, and even carry the packaging away! You get your choice of bonded stain and water repellent leather or plush microfiber in a variety of colors to fit any decor. **Call now!** 

#### The Perfect Sleep Chair® 1-888-723-7111

Please mention code 111018 when ordering.

Because each Perfect Sleep Chair is a custom-made bedding product, we can only accept returns on chairs that are damaged or defective.

## Telling the Story of Cooperatives for 75 Years

#### MESSAGE FROM GENERAL MANAGER/CEO JEFF LANE

**IF YOUR MAILBOX IS ANYTHING LIKE** mine, it seems to fill up nearly every other day with unwelcome deliveries.

We're bombarded with unsolicited advertisements and credit card offers, most of which go straight into the recycling bin. Then, invariably, come the bills—those sometimes unpleasant but unavoidable pieces of mail.

Sometimes, however, that mix of creased and crumpled papers includes an item we actually welcome. Perhaps this

COOPERATIVE PRINCIPLE

#### EDUCATION, TRAINING AND INFORMATION

Cooperatives provide education and training for their members, elected representatives, managers and employees so they can contribute effectively to the development of their cooperatives. They inform the general public, particularly young people and opinion leaders, about the nature and benefits of cooperation.

magazine you're reading right now is one such item—I know it is for me and the employees of Trinity Valley Electric Cooperative. But we're not the only ones. Since the first issue in 1944, generations of rural electric cooperative members have found value within the pages of *Texas Co-op Power*. And this month, as the magazine celebrates its 75th anniversary, I invite you to join me in recognizing the invaluable role it has played as a trusted voice for Texas electric cooperatives.

Every month, *Texas Co-op Power* is delivered to your mailbox to entertain, enlighten and, most importantly, educate you

and your family. In fact, this magazine is one of the primary vehicles through which TVEC fulfills Cooperative Principle No. 5, Education, Training and Information. Through these pages—and online—we communicate directly with you, our members, about matters that are important for the cooperative. We also share tips on maximizing the energy efficiency of your home and offer safety information that may even save your life. And as technology continues to advance at a sometimes overwhelming pace, we use this magazine to help you understand how new technologies fit into your daily life.

But the magazine offers so much more than that. It's also a key component in our efforts to enrich members' lives and uplift our communities. Were it not for this magazine, you might not be aware of all the local charitable work the co-op supports or how you, too, can lend a helping hand in our area through programs such as Operation Round Up. And by reading stories about history, nature and the outdoors, travel destinations and more, our members become more informed about our extraordinary state.

Throughout the years, *Texas Co-op Power* has connected co-op members near and far. A contest-winning recipe by a member in one part of the state has the power to bring a family together at a dinner table hundreds of miles away. A letter to the editor from a reader in the Panhandle may spur a response from another on the Gulf Coast, and a conversation begins. A feature about the work of a Southwest Texas woman to raise awareness about a serious health condition can—as we've seen—inspire others from across the state to pitch in, and a movement is formed.

Of course, through the internet, we have access to countless sources of information and ways to connect. But there's nothing quite like holding this magazine in your hands and knowing that it's made especially for you—our co-op members—and with your best interests in mind.

So, as *Texas Co-op Power* reflects on 75 years of empowering rural Texans, know that you, too, are a part of that history. And with each new issue you read, you carry the story of the magazine—and the cooperative message that it imparts—into the future.

## **Co-op Connected: Four Mile Lutheran Church**

Founded in 1848 on Four Mile Prairie, the small congregation has maintained a foundation of faith for Lutherans around the area.

#### Much like today, the early days after Texas joined the

United States saw waves of people coming to make a new home and fortune in the Lone Star State.

The opportunity for making a new life in Texas was a draw in 1847 when Johan Reierson led a group of Norwegian Lutherans to Four Mile Prairie in western Van Zandt County.

After a daunting journey across the Atlantic, going by land from New Orleans to East Texas and a short stay in what is now Brownsboro, the group settled and came together to form what is now the oldest Lutheran church in the state of Texas.

The church's cemetery tells the tale of the early pioneers, and the small white buildings stand in contrast to the surrounding oaks and elms in a way reminiscent of a historic illustration. Tucked back off of any main thoroughfare, finding the church is like coming upon a scene from the past.

Fortunately, the church's history was captured in the letters of prolific writer Elise Waerenskjold, who worked in the church for a time. Her correspondence was of such a quality that they were compiled into the book *The Lady With a Pen*, keeping the deep roots of the church's place in history for all to read.

By 1860, the nearby community of Prairieville was booming, and contributing to the local economy and civic projects. Elise's husband, Wilhelm Waerenskjold, was hired to furnish building materials for the new Kaufman County Courthouse.

According to *The History of Van Zandt County*, "No more industrious, patriotic, self-supporting people have ever settled in Van Zandt County than these hardy Norwegians."

The Civil War put a major strain on the economies and families throughout the country, and Prairieville saw its share of turmoil. The Norwegians were generally sympathetic to the north and were against slavery, which caused friction in the community.

Then in 1868, the community and the church at its core was tested by the departure of many key families who moved to Bosque County after sickness swept through the community, killing some 12 people in 1867 alone.

Despite the losses, the church remained steadfast in its mission and ministry to its part of the Texas landscape.

"Now, our mission is the same as always, but we have the same struggles as any modern church," said Ted Swinford, who serves as president of the church council. "How do you reach a generation that has grown up on iPhones and the internet, and get them to see

what it means to be a part of something like this?"

If history is any indicator, the church has a great future ahead no matter the changes that come.

The church's cemetery has graves dating back to early settlers from Norway.

## Electricity 101: The Flip of a Switch

Have you ever wondered why they call it electricity?

#### IT'S NAMED AFTER THOSE TINY PARTICLES OF ATOMS CALLED ELECTRONS, AND THAT'S

the place to start in understanding how power plants make something that reliably lights your home with the flip of a switch.

Getting all those electrons to march together inside a wire has been described as one of civilization's greatest and most complex engineering feats.

Just about all electricity starts with the same scientific phenomenon: Spinning a magnet inside a coil of wires generates electricity. That's why, deep inside most power plants, are large turbines turned by different means—the pull of gravity on water at a hydroelectric dam; the rising heat from burning coal or natural gas at a fossil fuel station; atomic energy at a nuclear power plant; or wind turning the blades of a wind turbine. One exception is solar energy, which uses materials that produce electricity when they're activated by sunlight.

Most large generating plants need large banks of transformers to boost the voltage of the electricity for the trip of hundreds of miles through wires held up by tall transmission towers. As it nears your neighborhood, the voltage is reduced at one of those fenced-in complexes of wires and transformers called a substation. As the electricity gets closer to your home or business, the voltage is reduced again with smaller transformers, which you can typically see mounted on a nearby utility pole or inside a ground-level green box.

Beyond these basics, all that flowing electricity needs to be coordinated so it gets to the right house just as it's needed. That's where Trinity Valley Electric Cooperative comes in. Our line crews take care of our distribution lines that bring the power to your home. This highly trained team performs routine maintenance to keep the lines in good order and responds quickly to restore power whenever there is an outage.

When you think about it, that's a lot of power in the simple flip of a switch!

#### Help Neighbors Keep Cool

IT'S HARD ENOUGH TO ENDURE THE summer heat when you're healthy, fit and have an air-conditioned home. But not everyone may be as prepared as you are.

Keep an eye on your neighbors and others who might need help getting through the hottest summer days, which can put people at risk for heat-related illnesses and can exacerbate existing medical conditions.

Doctors recommend that you spend the hottest part of a sweltering summer day indoors enjoying the air conditioning.

But for those whose homes don't have air conditioning or who can't afford to turn it on, the risk is acute. That's especially true for the elderly and ill, who could be at risk for heatstroke or even death.

#### If you know someone whose house might get too hot to handle this summer:

► Call them or stop by to check on them every day.

Arrange a phone tree so others can help check on neighbors who live alone when you're not able to.

• Encourage neighbors or family members to use air conditioners during the hottest part of the day or spend it in an air-conditioned public place, like a mall or library.

► If you find someone in medical distress because of the heat, call 911.

Show your neighbors you care enough to check in. You could save someone's life.

#### DURING SUMMER MONTHS, YOU'RE LIKELY TO TAKE MORE

showers than usual since there's more swimming, sports and yardwork going on. That makes it a good time to make sure your bathroom is a safe place.

The bathroom is one of the few places in the home where electrical appliances and water have a great chance to meetand a great chance to cause electrical shock or death. If you have kids, the bathroom can be a room of hazards, electrical or otherwise, waiting to happen.

But it doesn't have to be. Try these tips to dampen the danger:

▶ All power outlets in the bathroom should be equipped with ground-fault circuit interrupters, which can sense when an electric current is improperly grounding and automatically shut down the power, potentially preventing a nasty shock.

▶ Use a bathmat with a nonskid bottom and use a nonslip mat or decals on the floor of the tub. 60149967003

▶ Keep medications and vitamins in their original containers to avoid confusion, and always choose child-resistant caps. Keep medications and cleaning supplies locked away if there

are small children in the home.

▶ Make a storage space under the counter and out of the way for hair dryers, curling irons and other electrical appliances that could be hazardous with water contact. Educate children on the dangers of mixing water and electricity.

▶ Never handle electrical appliances when your hands are wet or you are standing in water.

▶ Any exposed or frayed wiring in the bathroom—and anywhere else inside or outside your home-should be addressed and repaired immediately.

Check the temperature of bathwater and turn the tap off before putting children in the tub. Tap water can instantly scald if it is too hot. Lower the temperature on your water heater to 120 degrees to guard against burns, but keep bathwater at 100 degrees or lower. Also, never leave children unattended during bath time.

▶ Use only electrical appliances and cords that bear the label of an independent testing laboratory, such as Underwriters Laboratories.

## Don't Touch That Dial

#### IT'S SO TEMPTING TO TURN THE THERMOSTAT DOWN TO FREEZING COLD WHEN YOU walk into a warm house on a hot day. Don't do it.

Setting the thermostat at a very low temperature won't cool your house any faster than setting it to the temperature that you regularly use to feel comfortable.

In fact, lowering the thermostat beyond the temperature you desire only makes your air conditioner run longer, not faster. You could end up paying more money for an uncomfortably chilly house.

#### Here are a few other energy-saving tips for summer:

► Install a smart thermostat. It will "learn" your family's habits and adjust temperatures accordingly, setting the temperature higher for hours when the house is empty and lower during your at-home hours. It takes less energy to recool your home when you return than it does to keep it cool while you're gone.

► Set the thermostat at 78 degrees. You'll save about 15% on your cooling bill versus a 72-degree setting.

► Use ceiling fans (rotating counterclockwise) to provide additional comfort, but only run them when the room is occupied. Fans cool people, not rooms.

► Change or clean your heating, ventilating and air conditioning system's filter. Changing your air filter keeps the air in your home cleaner, improves cooling performance and lengthens the life of your HVAC system. Filters should be cleaned or replaced at least every three months (or more often, depending on system requirements). High-quality HEPA filters will yield the best results.

► Keep lamps and other heat-emitting devices—like TVs and large electronics away from the thermostat. Most appliances heat up when you use them, so they can trick the thermostat into "thinking" the air is warmer than it really is, causing your HVAC system to keep running when the house is already cool.

► If you let the morning sunlight into your bedroom to help you wake up naturally, it could add to your energy bills during the day if you leave the blinds open for too long. Before you leave the house for the day, close your curtains and window shades to keep the sun's heat out.

▶ If you use room air conditioners, fit them snugly into window frames.

Operating in Anderson, Dallas, Henderson, Hunt, Kaufman and Van Zandt counties

## Hand Up Network Meets Needs With Volunteer Teams

#### First responders and even power line crews do a great job responding to

disasters and emergency events. But once the immediate safety concerns are taken care of and first responders get back to, who takes care of the needs of the community?

That is where the Hand Up Network group of response teams and personnel step in. "We are focused on the long term, bringing teams of local people who are dedicated to long-term work to help rebuild and get the community back in the position

Jessica Richardson and Sam Smith accept an Operation Round Up grant from TVEC's Kari Wilmeth.

Hand Up Network \$2,500 they were in before anything happened," said Sam Smith, CEO of Hand Up Network. "First responders look to us to help manage volunteers that want to be a part, and we can do that with teams based on the specific needs for any situation. It could be tarp crews for roof damage, or medical teams, chain saw teams or even prayer and emotional support. We do a little bit of everything."

Hand Up Network works in 37 East Texas counties, including all of the TVEC service territory.

Most recently, their teams were in place ahead of this year's tornadoes near Canton and Cedar Creek Lake, and they had crisis response personnel on site after the tragic school bus crash in Athens.

"Our entire network is basically for anyone in need," Smith said. "Any incident that happens, you can be confident that someone from our network will be there almost immediately."

To accomplish this, Hand Up Network uses technology and a lot of communication among volunteers.

"It is easy to be a volunteer; all you have to do is sign up on our website and then we can find out what skills you have," Smith said. "And we can use anyone. For any abilities you have, we can likely find a place for you, should the need arise. That doesn't mean that if you sign up today you will be needed tomorrow, but knowing what skills you have means we can develop teams quickly and when it is time to respond, we can put together a team of people with the right skills to take care of the needs in that particular situation."

For more information or to volunteer, visit handupnetwork.com.

THE TVEC CHARITABLE FOUNDATION recently awarded seven grants totaling \$16,500. Recipients of the grants include the above and:

Brownsboro ISD Education Foundation - \$2,000

Casey's Place, Kaufman \$2,000

Wills Point Middle School Backpack Program - \$2,000

Henderson County 4-H Adult Leader Council - \$1,000 Henderson County Young Life \$2,000

Senior Connect, Kaufman \$5,000

## Win \$25 Just for Reading

Somewhere, hidden on Pages 18-23, is a TVEC account number. Read closely. If the account number is yours, contact the Member Services Department by August 30 to receive a \$25 credit on your electric bill. Don't miss out—you could be a winner.

Founded in 2013, the TVEC Charitable Foundation is an independent, nonprofit organization. The foundation was created to serve the community and help improve the quality of life for residents in our service area. **The foundation is funded entirely by donations from TVEC members who participate in Operation Round Up.** For more information, please call 1-800-766-9576 or visit tvec.net.

## Caddo's Gems

East Texas lake once teemed with pearl hunters

#### **BY MARTHA DEERINGER**

PEARLS, TREASURES FOUND IN THE FLESH of oysters, clams and mussels, were wellknown and prized in 20th-century America. That's why a Japanese immigrant's 1909 discovery at Caddo Lake sparked a Texas version of the gold rush.

Sachihiko Ono Murata, believed to be the educated son of a Japanese admiral, served several years as a captain's personal chef aboard a U.S. Navy ship in the Pacific fleet before settling on the north shore of Caddo Lake around 1905. The largest natural lake in Texas, Caddo stretches 25 miles along the Louisiana border. Murata loved the lake's cypress trees and found a job cooking for workers on the oil rigs that dotted the lake.

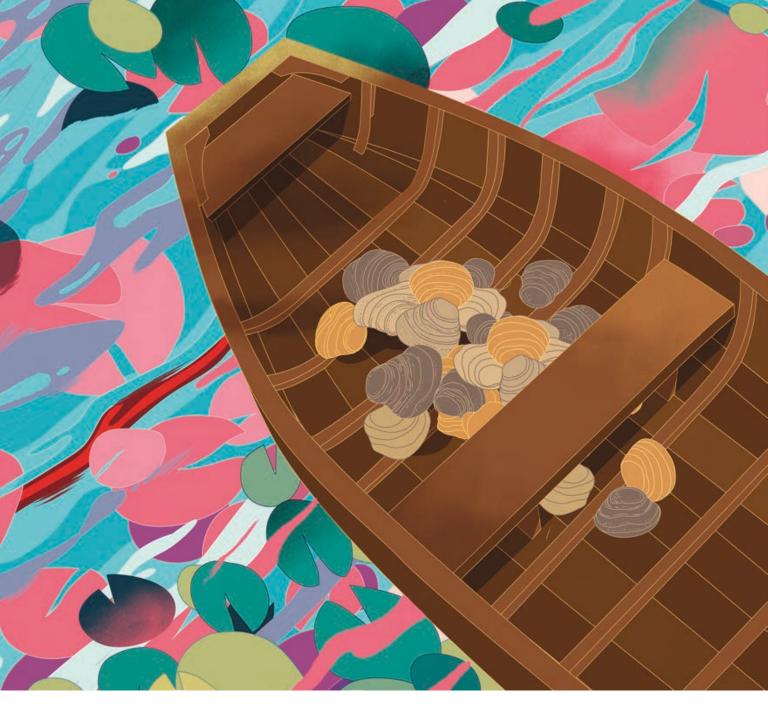

The shallow lake, originally formed by a massive logjam on the Red River that was removed and replaced in the early 1900s by an Army Corps of Engineers dam, teemed with freshwater mussels, which Murata used as bait for catfish. In 1909, Murata found a large pink pearl in a mussel near Potter's Point. A day or two later, he discovered another pearl of similar size. Rumors flew that he sold the pearls to Tiffany & Co. for \$1,500 each. Treasure seekers came by wagon, on horseback and on foot to hunt for pearls.

Anglers who made their living on the lake set aside nets and trotlines and became "pearl hogs," vernacular for folks who crawled on all fours through the shallow water picking up mussels and tossing them into small boats they dragged to hold the catch. Most of the pearl hogs were local farmers who brought their families and camped near Caddo Lake for the summer.

In those days, farmers in Texas typically made no more than \$600 a year, so the promise of a pearl or two suggested a nice bonus. A pearl dealer named Dr. Owen came from Arkansas and set up his headquarters at Mooringsport, Louisiana, according to the July 1959 edition of *The Southwestern Historical Quarterly*. He kept a money satchel in the bottom of his boat, and when someone shouted "Pearl!" he motored to the hunter and paid cash for the find.

Most of the pearls brought \$20 or \$25, but Mrs. Jeff Stroud of the Lewis community sold a whopper for \$900, *The Southwestern Historical Quarterly* reported. For three summers, pearl hunting was so lucrative that commercial

anglers on Caddo gave up fishing entirely, although some unlucky hunters reported that they worked for weeks without finding a single pearl.

During peak hunting season in the summer, up to 500 tents sprouted and up to 1,000 pearl hunters took to the lake each day. A problem arose once when a pile of discarded mussels created an awful stench, but a farmer brought his hogs, and they ate the decaying bivalves. Many families brought provisions from their farms, and a store from Oil City, Louisiana, periodically dispatched a hack with coffee, flour, lard and other staples.

In 1914, engineers expanded a dam built below the hunt area, and the lake rose 10 feet, flooding the mussel beds. The mussel hunters went home, and the Caddo fishermen went back to fishing. Murata then opened a fishing camp. When the FBI forced Japanese Americans into internment camps during World War II, Louisiana and Texas officials, led by Texan "Cap" Taylor (Lady Bird Johnson's father), who lived in nearby Karnack, persuaded the agents to leave Murata undisturbed. He died at his fishing camp just after the war ended.

Freshwater mussels still thrive in Caddo Lake, according to Brandon Lopes-Baca, superintendent at Caddo Lake State Park, but no collecting is allowed in the park.

Martha Deeringer, a member of Heart of Texas EC, lives near McGregor.

## **Our Fearless Forefather**

G.W. Haggard was founding editor of this magazine and a stalwart champion of electric co-ops

**BY ELLEN STADER** 

HE BEGAN LIFE A FARM BOY. HE GREW into a staunch journalist and rural advocate. After his death, a prestigious journalism award was named for him. The man was George Wilford Haggard, and he created this magazine.

Haggard devoted himself to a life of defending responsible journalism and the rights of rural people who received electricity from cooperatives. Texan political reporter Liz Carpenter described him as a man for whom "rural electrification is his religion."

Born in 1908 on a farm in Comanche County, Haggard went to study in 1926 at Hardin-Simmons University in Abilene, where he took a job with the *Abilene Reporter-News*.

Haggard graduated in 1930 and embarked on a career that advanced steadily. He was city editor at the *Sherman Democrat* and later taught journalism at Abilene High School, leading the school's student newspaper to international honors.

Eventually, the Texas Farm Bureau hired him to edit its monthly publication. Haggard proved an adept reporter and fearless fighter. After helping quash bills in the Legislature that would've crippled public power, he became executive secretary of the bureau.

Haggard's next venture set the stage for his life's work: In 1944, he became executive secretary of the Texas Power Reserve Electric Cooperative and editor of its newspaper, *Texas Cooperative Electric Power*. (Today, we call the association

Texas Electric Cooperatives and its magazine *Texas Co-op Power*.)

Haggard's dedication to truth was auspicious, as his new position routinely required him to set the record straight. Distortions and manipulations leveled at electric co-ops by the for-profit power industry (and politicians in its pockets) kept Haggard's rhetoric at prime fighting weight.

He answered preposterous allegations with fundamental cornerstones of the electric co-op message such as: "Co-ops are not tax-exempt. They pay local, school, county and state taxes," and "For 50 years, private power refused to serve rural areas, claiming it was not practical or feasible. But the farmers themselves are successfully performing the task that the power people said was impossible."

Haggard's honest, outspoken integrity was noticed at the national level. In 1948, he joined the Rural Electrification Administration in Washington, D.C., stating his objectives by saying, "We want very much for every co-op member to realize fully that he owns the co-op. He'll fight for what he owns." A year later, Haggard was promoted to deputy administrator, the REA's No. 2 leader.

Sadly, in June 1951, Haggard and five fellow REA employees died in a plane crash outside Fort Collins, Colorado. The tragedy left a gaping hole in the REA roster and morale. U.S. Sen. Tom Connally of Texas summed up the feelings of many national officials with his condolences: "I'm grieved and shocked at the tragedy. I knew and esteemed George Haggard. ... His death will be a great loss to the state and the nation."

In 1958, the National Rural Electric Cooperative Association issued its first George W. Haggard Memorial Journalism Awards recognizing statewide publications that present "lucid, forthright contributions to electric cooperative objectives." *Texas Co-op Power* in 2007 took home its most recent award named after its indomitable founder.

**Ellen Stader** is a writer in Austin. For more on Haggard's feuds with politicians, read the June 2019 Texas History story *The Nylon Campaign* on our website.

#### Take Home America's Most Iconic Coin Authentic American Buffalo Nickels Available While Supplies Last!

B ig, bold and full of life. That's the dream American sculptor James Earle Fraser had for his new U.S. five-cent piece—and boy, did he deliver.

The classic American Buffalo Nickel is incredibly brave in its use of space, taking up nearly the entire face of both sides of the coin. It showcases two icons of the American spirit—an American bison and a composite profile of three Native American chiefs.

The Buffalo Nickel created generations of coin collectors around the world. And now, through this special offer, you can secure a half or full roll of these historic, absolutely authentic coins in Good or better condition at an incredible price!

#### Hold The Spirit of America in the Palm of Your Hand

Struck between 1920 and 1938, these coins circulated heavily throughout the United States, especially during the Great Depression. Many were worn down until they were unrecognizable, while others have disappeared into private collections. But you're in luck—the coins offered here have stood the test of time for more than 80 years with their full date and main details intact.

#### **Buy More and Save!**

You can secure a 20-coin half-roll of authentic Buffalo Nickels for less than \$2.50 per coin, or buy a full 40-coin roll for just

\$2.00 per coin and SAVE \$19.95. Each set comes in a numismatic tube accompanied by a custom storybook and certificate of authenticity. Dates vary.

## Here's the Beef

WHEN IT CAME TO HOME COOKING, the 1970s had a split personality. On one hand, it was the decade of sunflower seeds (not widely available until then) and healthy eating. This magazine offered instructions for making a gingerbread house with granola bars in December 1978. On the other hand, Julia Child had become a household name, and popular beef dishes ranged from Hungarian goulash to French *ragoût de boeuf* and spicy bowls of red.

The following recipe, which appeared in *Texas Co-op Power*'s *60 Years of Home Cooking*, won Gay Dixson (then a member of Pedernales EC) the Texas State Fair El Chico Chili Contest in 1973. A few adjustments for modern tastes (using pure ground chile and olive oil instead of shortening) make the results more vibrant and just as satisfying.

PAULA DISBROWE, FOOD EDITOR

#### **Texas State Fair Chili**

- 3-4 pounds chuck, cubed
- 2 tablespoons kosher salt
- 1 tablespoon ground black pepper
- <sup>2</sup>/<sub>3</sub> cup flour
- 2 tablespoons olive oil (or vegetable shortening or bacon fat)
- 2 medium onions, chopped
- 2-3 cloves garlic, minced
- 2 quarts water, heated
- 3 tablespoons hot paprika
- 2 tablespoons ground cumin
- <sup>1</sup>⁄<sub>4</sub> cup plus 2 tablespoons pure ground chile powder (such as ancho or New Mexico)

2 cans (8 ounces each) tomato sauce Hot sauce, as desired

1. Place the beef in a mixing bowl, sprinkle with the salt, pepper and flour and use your hands to combine until the meat is well-coated.

2. Heat the oil (or shortening) in a large, heavy Dutch oven over medium-high heat. Add the beef (in batches as necessary) and brown on all sides; use a slotted spoon to CONTINUED ON PAGE 32

#### **Retro Recipes**

#### Here's the Beef

#### THIS MONTH'S RECIPE CONTEST WINNER

#### **KITTIELE POTTS** | BOWIE-CASS EC

This light and fresh take on beef is great for August heat. The steak cooks quickly on the grill, so you won't overheat (and neither will your

kitchen). A versatile recipe, it easily doubles to serve more, and you can use other fruits besides strawberries, depending on your tastes and what's in season. Try peach, mango or kiwi for a different twist.

#### Steak Tacos With Pineapple Salsa

- 1 pound flank steak
- <sup>1</sup>⁄<sub>4</sub> cup red wine vinegar
- 1/4 cup soy sauce
- 1/4 cup balsamic vinegar
- 1 teaspoon Worcestershire sauce
- 5 large strawberries, chopped
- 2 fresh pineapple rings, chopped
- 1/2 teaspoon finely chopped cilantro
- 1/2 jalapeño pepper, finely chopped
- 1/2 teaspoon lime juice
- 1/2 teaspoon lemon juice
- 1 tablespoon olive oil
- 1 teaspoon finely chopped red onion
- 6 flour tortillas
- 3 ounces feta cheese, crumbled Cilantro for garnish (optional)

**1.** Place the steak in a resealable plastic bag and add the red wine vinegar, soy sauce, balsamic vinegar and Worcestershire sauce. Let steak marinate 6 hours

#### in a refrigerator.

In a bowl, combine the strawberries, pineapple, cilantro, jalapeño, and lime and lemon juices.
 In a nonstick skillet, add the olive

- oil and red onion. Sauté until onion is tender and translucent. Drain onion on a paper towel and add to bowl, tossing all ingredients thoroughly.
- 4. Remove steak from marinade.
  Place on a grill at medium heat. Grill
  7 minutes on each side or until steak reaches desired level of doneness.
  Slice steak into thin strips.

5. Heat tortillas up by placing them individually on a hot skillet briefly.
Fill tortillas with the steak, salsa and feta to make tacos. Garnish with additional cilantro, if desired.
Makes 6 tacos.

**COOK'S TIP** If you don't mind the bite of fresh red onion, add it in raw in step 3.

#### \$100 Recipe Contest

January's recipe contest topic is **New Year's Resolution**. After holiday excess, you might be trying to eat healthier. Share the soups, smoothies and other dishes that get you back in balance. The deadline is **August 10**. Readers whose recipes are featured will receive a special *Texas Co-op Power* apron.

ENTER ONLINE at TexasCoopPower.com/contests; MAIL to 1122 Colorado St., 24th Floor, Austin, TX 78701; FAX to (512) 763-5401. Include your name, address and phone number, plus your co-op and the name of the contest you are entering.

#### CONTINUED FROM PAGE 31 transfer to a plate.

**3.** Add the onions and garlic and cook, stirring, until the vegetables have softened. Add the cooked beef back into the Dutch oven along with 2 quarts of hot water and simmer 1 hour.

**4.** Stir in the paprika, cumin, chile powder and tomato sauce and simmer an additional hour, stirring often, until the meat is very tender. Taste for seasonings and add additional salt and hot sauce, to taste. ► Serves 6–8.

#### Korean Lettuce Wraps

LU FULLILOVE | GUADALUPE VALLEY EC Make this spicy, tangy dish for a quick weeknight meal. Keep it simple or add other garnishes like cilantro, chopped peanuts or onion. For a heartier version, stir in a cup of cooked rice before serving.

- 1 pound ground beef
- 2 cups sliced fresh mushrooms
- 3 sliced green onions, green part reserved
- 1/4 teaspoon salt
- 1/2 teaspoon black pepper
- <sup>1</sup>/<sub>3</sub> cup gochujang (Korean chili sauce)
- 2 tablespoons sugar
- 2 tablespoons soy sauce
- 1 tablespoon rice vinegar
- 1 tablespoon sesame oil
- 2 cloves garlic, minced
- 1 tablespoon grated fresh ginger
- 1 carrot, shredded

Iceberg or butter lettuce leaves Sesame seeds (optional)

**1.** Add ground beef, mushrooms and white parts of onions to a large frying pan over medium heat. Add salt and pepper, then stir and cook until browned, 5–10 minutes. Drain beef, if desired.

**2.** Add gochujang, sugar, soy sauce, rice vinegar, sesame oil, garlic and ginger; cook 5 minutes. Taste for seasoning and add salt, if needed.

**3.** Add carrot and cook 1 minute. (Add a little water if sauce is too thick.)

**4.** Serve with iceberg or butter lettuce leaves. Garnish with green onion tops and sesame seeds. ► Serves 4.

**COOK'S TIP** I found gochujang at my local H-E-B, but it is also available online and at Asian markets.

This month, Food Editor PAULA DISBROWE offers a favorite beef recipe from her new cookbook, *Thank You* for Smoking.

#### Togarashi Porterhouse

You might think of a porterhouse as the T-bone's luxurious cousin. Both steaks have the iconic T-shaped bone that imparts flavor and divides the sirloin and tenderloin—the most premium cuts of beef available. But a porterhouse is cut from the rear end of the short loin, so it has a bigger section of luscious tenderloin. The meat is so extraordinary that you don't want to do too much to it. Here subtle heat is added with shichimi togarashi, a peppery Japanese condiment, and a quick turn in a garlic-soy marinade that enhances the beef's umami.

- <sup>1</sup>/<sub>4</sub> cup soy sauce
- 2 tablespoons olive oil
- 2 tablespoons shichimi togarashi
- 2 cloves garlic, grated on a Microplane

#### 2 1<sup>1</sup>/<sub>2</sub>-inch-thick porterhouse steaks, about 3<sup>1</sup>/<sub>2</sub> pounds total

 In a small bowl, combine the soy sauce, olive oil, togarashi and garlic. Pour 3/4 of the marinade into a baking dish and reserve the rest. Lay the steaks in the marinade and flip them a few times to generously coat. Set aside to marinate 10 minutes.
 Prepare a charcoal grill for two-zone cooking and build a medium-high fire, or heat a gas grill to high.

**3.** When the coals are glowing red and covered with a fine gray ash, add your smoke source (chips, chunks or log). Carefully wipe the preheated grill grates with a lightly oiled paper towel. Using a grill brush, scrape the grill grates clean, then carefully wipe with a lightly oiled towel again.

**4.** When the fire begins to produce a steady stream of smoke, place the steaks over direct heat, close the grill, vent the grill for smoking and smoke 2 minutes. Move the steaks to indirect heat, close the grill and smoke 4–5 minutes. When juices

appear on top of the meat, flip the steaks and repeat the process, starting on direct heat 2 minutes, then moving to indirect heat 4–5 minutes, until the meat is nicely charred and glossy and an instant-read thermometer inserted into the thickest part of each steak reads 125 degrees, 15–20 minutes total; carryover heat will take it to 130 degrees for medium-rare as it rests. Transfer the meat to a cutting board to rest 10 minutes.

**5.** Using a sharp knife, cut the meat off the bone, then cut the sections into thin slices. Serve with the remaining marinade on the side. ► Serves 6–8 (or 4 steak lovers).

## **ADVANCED** HEARING AID TECHNOLOGY For \$19999+FREE

"I was amazed! Sounds I hadn't heard in years came back to me!" - Don W., Sherman, TX

#### How can a hearing aid that costs only \$19999 be every bit

as good as one that sells for \$2,400 or more?

**The answer:** Although tremendous strides have been made in Advanced Hearing Aid Technology, those cost reductions have not been passed on to you. Until now ...

MDHearingAid<sup>®</sup> uses the same kind of Advanced Hearing Aid Technology incorporated into hearing aids that cost thousands more at a small fraction of the price.

Over 350,000 satisfied MDHearingAid customers agree: High-quality, FDA-registered hearing aids don't have to cost a fortune. The fact is. you don't need to spend thousands for a hearing aid. MDHearingAid is a medical-grade hearing aid offering sophistication and high performance, and works right out of the box with no time-consuming "adjustment" appointments. You can contact a licensed hearing specialist conveniently online or by phone — even after your purchase at no cost. No other company provides such extensive

support. Now that you know...why pay more?

## **MD**HearingAid<sup>®</sup>

DOCTOR DESIGNED | AUDIOLOGIST TESTED | FDA REGISTERED

#### **Can a Hearing Aid Delay or Prevent** Alzheimer's and Dementia?

A study by the National Institute on Aging suggests older individuals with hearing loss significantly more likely to develop are Alzheimer's and dementia over time than those who retain their hearing. They suggest that an intervention — such as a hearing aid — could delay or prevent this by improving hearing!

#### **TAKE ADVANTAGE OF OUR** 45-DAY RISK-FREE TRIAL!

Hearing is believing and we invite you to try this nearly invisible hearing aid with no annoying whistling or background noise for yourself. If you are not completely satisfied with your MDHearingAid, return it within 45 days for a FULL REFUND.

## Fun in the Past Tense

Odd, fascinating collection at the Frontier Times Museum in Bandera makes for memorable visit

WHAT DO A TWO-HEADED GOAT, A STUFFED mountain lion and a ventriloquist doll named Gino R Tree have in common? They're part of the weird and wonderful collection of artifacts at the Frontier Times Museum in Bandera. If you find yourself tripping through the Texas Hill Country with an appetite for the abnormal, this is a must stop.

Bandera sits about 50 miles northwest of San Antonio and calls itself the Cowboy Capital of the World. Stephenville also claims that title, but that's a debate for a whole other article. What's indisputable is that cowboy culture is alive and well in Bandera. The scenic hills are full of dude ranches, the visitor center hosts weekly gunfights, and there are plenty of places to eat a cowboy-sized chicken-fried steak. The Old Spanish Trail Restaurant even has saddles instead of stools at its bar. But something you might not expect are the bizarre relics inside the town's eclectic museum.

Few probably remember Frontier Times, but for 31 years, the magazine published stories of the Wild West, replete with train robberies, outlaws and gold prospecting. It was started in 1923 by J. Marvin Hunter, a newspaperman and amateur historian. Very soon after Hunter launched the monthly publication, his readers began sending him their own tales along with strange family heirlooms. Hunter believed that if an item was important to its donor, it should be important to everyone, so he never turned down a gift. He filled his office with curiosities from around the globe. And if he didn't know an artifact's story, he would make one up.

Once the collection outgrew the room, Hunter tore down a wall and built a bigger

Chet Garner discovers artifacts at the Frontier Times Museum in Bandera. room. Before long, he was running a full-on museum and entertaining his vis-

itors with strange stories and circuslike curiosities, which earned him a reputation as the "P.T. Barnum of Bandera County."

Small-town museums can be strange. Some hold nothing more than rusted farming tools, while others hold treasures worthy of the Smithsonian Institution. The Frontier Times Museum is somewhere between those extremes.

The first thing that caught my attention was the building itself. Constructed in 1933, the exterior walls are made up of stone, petrified wood, quartz crystals and brain coral—a fitting allusion to the mixture of items I found inside. It seemed as though every inch of wall was covered: an old photograph, old clock or old taxidermied animal. I began by browsing the stories of Texas settlers but quickly found myself drawn to the stranger side of the museum.

There was a mummified squirrel found in someone's attic and presented in a glass case. There was a shrunken human head from South America, a sculpture made of rattlesnake rattles and a two-headed goat that was born on a local ranch and donated after it died. Most fascinating was the story of a stuffed mountain lion named Sally that a man from Pearsall had kept as a house pet and that rode shotgun in his truck.

In the back was the Texas Heroes Hall of Honor recognizing rodeo cowboys and others who have made a lasting contribution to Texan culture. I learned about Bandera native "Mighty Mite" Ray Wharton, who was short in stature but could rope a calf like no other and won a world championship at Madison Square Garden.

That day, I gained a lot of knowledge about Bandera's history and a lot of new mental images to feed my nightmares. As I walked out, I asked the manager if the museum was still taking donations.

"Of course," she said. "What do you have?"

"Nothing yet," I replied. "But I'm sure I can find you something."

And after I find the artifact, I can work on finding the sort of accompanying story that would make Mr. Hunter proud.

**Chet Garner** shares his Texplorations as the host of *The Daytripper* on PBS.
