GAMBUSIA IS GONE

A tiny Texas fish is among 23 species that federal wildlife officials want to declare extinct.

The San Marcos gambusia, an inch-long fish found only in the San Marcos River in Hays County, was last collected in the wild in 1983. The Fish and Wildlife Service has recommended that it join 21 other animals and one plant in being removed from the endangered species list and declared extinct.

Co-ops Rule

Electric cooperatives dominated the 2021 J.D. Power rankings for customer satisfaction, with 14 co-ops —including Texas' Magic Valley EC and CoServ—finishing among the top 20 U.S. residential power providers in the annual survey of electric customers.

Gov. Jordan

AMONG BARBARA JORDAN'S many accomplishments was becoming Texas governor for a day 50 years ago this month.

Months before her election to the U.S. House, her colleagues in the Texas Senate unanimously elected Jordan president pro tem. Gov. Preston Smith and Lt. Gov. Ben Barnes both made plans to be out of state June 10, 1972, enabling Jordan to step in as acting governor, making her the first Black woman in the U.S. to preside over a legislative body.

"To you, it's the **perfect lift chair.** To me, it's the **best sleep chair** I've ever had."

— J. Fitzgerald, VA

You can't always lie down in bed and sleep. Heartburn, cardiac problems, hip or back aches – and dozens of other ailments and worries. Those are the nights you'd give anything for a comfortable chair to sleep in: one that reclines to exactly the right degree, raises your feet and legs just where you want them, supports your head and shoulders properly, and operates at the touch of a button.

Our **Perfect Sleep Chair**[®] does all that and more. More than a chair or recliner, it's designed to provide total comfort. **Choose your preferred heat and massage settings, for hours of soothing relaxation.** Reading or watching TV? Our chair's recline technology allows you to pause the chair in an infinite number of settings. And best of all, it features a powerful lift mechanism that tilts the entire chair forward, making it easy to stand. You'll love the other benefits, too. It helps with correct spinal alignment and promotes back pressure relief, to prevent back and muscle pain. The overstuffed, oversized biscuit style back and unique seat design will cradle you in comfort. Generously filled, wide armrests provide enhanced arm support when sitting or reclining. **It even has a battery backup in case of a power outage.**

White glove delivery included in shipping charge. Professionals will deliver the chair to the exact spot in your home where you want it, unpack it, inspect it, test it, position it, and even carry the packaging away! You get your choice of Genuine Italian Leather, plush and durable Brisa[™], stain and liquid repellent DuraLux[™] with the classic leather look or plush MicroLux[™] microfiber, all handcrafted in a variety of colors to fit any decor. **Call now!** Also

The Grazing Craze

BY SHERYL SMITH-RODGERS

've yanked henbit and chickweed for years from my native-plant gardens, nearly eradicating the weeds that pop up every winter.

If only I'd known that the European species make tasty additions to salads. So I decided in December to let them stay put. Then I'd have some fresh leaves and flowers to toss with spinach, tomatoes and dressing.

Many of the native plants are edible too, like turk's cap, dayflower, wood sorrel and spiderwort. Hold on—eat my natives? The concept boggles my mind. As a Texas master naturalist, I'm familiar with most of the ones that grow in my region. On the other hand, since childhood I've been conditioned to eat foods only bought at grocery stores or intentionally grown in gardens, not picked from a lawn or some wild place.

Then I recall our ancestors foraged to survive. Their hard-

Pushed along by the pandemic and prices, foraging for wild edibles is a growing trend

scrabble lifestyles make me determined to loosen up. And I am. In March I picked blossoms from our eastern redbud tree and added them to salads. This summer I've been nibbling on turk's cap berries and pink evening primrose leaves. As I learn more about wild edibles, the plants that grow around my yard have taken on a different meaning.

I'm not alone in my new outlook. For a number of reasons, more and more people are hunting for edible plants.

"It used to be just adventurer eaters, foodies and cooks who mainly foraged," says Mark Vorderbruggen, author of an Idiot's Guides book on foraging. "Then the pandemic came, and people got scared about getting food if the markets closed. It made them go outside in search of alternative food sources. Now with inflation, food has become more expensive. People want to know where they can get free nutrition."

Cut With Care

S o what makes a wild plant edible? In a nutshell, it's nonpoisonous, palatable and digestible. Many have health benefits too. "In vitamins, minerals and protein, wild food can match and even surpass the nutritional content of our common foods," writes Delena Tull in *Edible and Useful Plants of Texas and the Southwest*. "Dandelion greens are more nutritious than spinach."

Foragers must always ask for permission before scouring private property. On public lands, it's illegal to take plant materials. Steer clear of toxic areas, like highway roadsides and places frequented by pets.

And some final words of caution: Before eating any wild plant, be absolutely certain of its identity. Read books on the subject, learn some basic botany, take foraging classes and go out with an experienced forager to gain an understanding of what you should and shouldn't eat.

Then start with easy plants, like turk's cap and pecans. As you gain knowledge, add species that you can readily identify. Also, eat wild edibles in moderation and be mindful of possible reactions. For example, if you're allergic to cashews and mangoes, avoid their cousins: evergreen and flameleaf sumacs.

"Nature is a mishmash of greens and browns," says foraging expert Courtney Taylor of Weston, north of Dallas. "To most people, plants all look the same. It takes time, patience and consistency to learn the nuances between them. Wood clover and clover, which are both edible, look similar but have subtle differences."

Taylor, a Grayson-Collin Electric Cooperative member, teaches basic foraging classes and compiled a 60-page e-book on North Texas edibles. In every class, she stresses foraging etiquette.

"Leave an environment better than you found it," she says. "Only harvest what you're going to use. Only take a leaf or two from a small plant. If you take all the leaves, that plant won't go to flower. As a forager you want that plant to be there next year. I believe that conscientious foragers can actually increase an environment's health and wild food populations."

> Depending on the month, Taylor harvests mulberries, persimmons, dewberries, pecans, black walnuts, hackberries and beautyberries among many others—often foraging in her rural neighborhood and along country roads. "The tastiest greens to me are lamb'squarters and chickweed," she says. "I also eat a lot of dandelion leaves for their health benefits. I like to make smoothies with them."

Educating others about useful plants is a top priority for Vorderbruggen, who produces videos, podcasts and presentations on the subject. "Most people assume all

Foraging Do's & Don'ts

Know what you're picking before you eat it.

Stay off private land unless you have permission.

Don't take plant materials from public lands; it's illegal.

Steer clear of toxic areas, like highway roadsides and places frequented by pets.

Pick up any litter you find.

WATCH YOUR STEP Look out for poison ivy when you get the itch to forage.

OPPOSITE Wild mulberries can be found all over Texas. Take a foraging class to learn to identify edible plants. LEFT Courtney Taylor is a 20-year foraging expert, especially on North Texas edibles.

plants are poisonous," says the Houston resident, who holds a master's in medicinal chemistry and a doctorate in physical organic chemistry. "Even people who want to forage and have read the books still have a fear of misidentifying something and dying as a result. My goal is to help them to trust themselves and eat a plant that they've properly identified."

Rooted to the Spot

n far North Texas, Kimberly Clark, a member of Fannin County EC, learned to forage by watching YouTube videos and joining foraging groups on Facebook. "Now my two kids like to forage with me on our acreage and in our area," she says. "We harvest elderberry, cattails, water violets, peppergrass and sorrel. My son's favorite is wild carrot, also known as Queen Anne's lace." (Caution: Queen Anne's lace looks similar to two extremely toxic plants: poison hemlock and water hemlock.)

Come midsummer, Tom Mitchell Jr. of Cleburne steers a golf cart around his neighborhood, looking for clusters of ripe flameleaf sumac berries. "They make a great mock lemonade," says Mitchell, a commercial pilot and United Cooperative Services member. "I put the berries in a pot of water and let them sit overnight. Then I strain the pink liquid and add some honey. The lemony flavor comes from the berries' malic acid. I also dry sumac berries, then grind them up to use as a spice."

Last year, forager Racheal Balliu-a Pedernales EC member and registered nurse who lives near Canyon Lake-took some "yard butter" to a party. At first her friends hesitated to sample the creamy condiment, mixed with chickweed, peppergrass, henbit and wild onions. "I've found that people are sometimes nervous to try foraged foods," Balliu says. "But after trying my butter, they loved it. They also love the pesto that I make with chickweed, basil, parmesan and pecans."

Her interest in wild foods has since morphed into a business called Forest Girl Wild American Tea. Her green and roasted yaupon teas are available online and sometimes at farmers markets. "Yaupon holly is the only natural caffeine in North America," she explains. "I hand-pick

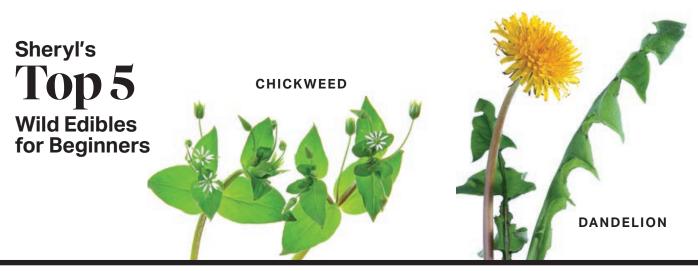

yaupon leaves on family land, wash and air-dry them, and then package the leaves as both tea bags and loose leaf."

In the Rio Grande Valley, wild edibles aren't as easy to find. That's because more than 90% of native habitats have been cleared through the years for agriculture and urbanization. "The nature we see here is more sterilized," says Jackelin Treviño of McAllen. "Buffalo grass and oaks are lovely, but they're not forageable. I see that gradually changing as cities plant more native plants.

"Foragers here are basically limited to private property with permission and conserved areas, where foraging is discouraged," she continues. "When I'm able to forage, my favorite wild edible in the Valley are berries from brasilwood. They look like blueberries, are shiny like grapes and taste like blackberries."

Out west in El Paso, the Chihuahuan Desert would seemingly offer even fewer finds. But outdoorsman James Harris

CHICKWEED: PHOTOGRAPHIEUNDMEHR | DREAMSTIME.COM. DANDELION: JENS STOLT | DREAMSTIME.COM TEXASCOOPPOWER.COM knows better. For nearly a decade, he's researched the vegetation and wildlife that inhabit the arid region that he's called home all his life. Now he shares his knowledge about wild foods and other survival skills through videos.

"Out here, one of our most plentiful wild edibles are honey mesquite pods and beans," he says. "They're very versatile. You can use them to make small cakes, teas, jellies, jams and energy bars. They also make a good coffee substitute, even though they don't have caffeine."

Prickly pear cacti are also very common, Harris says, and their pads and fruit are edible. "They're a pain to gather because of the thorns, so I always carry tweezers," he says. "Another edible is the banana yucca, which I call the 'supermarket of the desert.' The young flower stalks can be cut and cooked like asparagus. The white flowers are edible. You can also cook the green fruits."

From yuccas to chickweed, I noted a common interest in my conversations with foragers from across the state: They all love getting outside and exploring wild places. As Harris explains, "Being outdoors grounds you closer to the earth. You have a higher appreciation for the seasons and the plants when you interact with nature."

I couldn't agree more.

Texas' **Most Toxic Plants**

Speaking to Children

Meet the South Texas educator who isn't slowing down in her mission to instill a love of language in bilingual readers

> o understand what drives María Alma González Pérez, one must understand her love of language. Because her mother had only a grade school education, González Pérez mostly spoke Spanish—the only language she knew until enrolling in school—with clarity and precision.

"She did not want us mispronouncing words," González Pérez says. "She would say that the proper use of the language was something that defined you as an educated person."

Upon that principle, González Pérez earned a doctorate in education, then became a professor, college administrator, children's book author and, most recently, an entrepreneur—all while advocating for the importance of language. González Pérez, 70, is now a decade into her latest career a publisher on a quest to bring more Hispanic culture into children's books.

The native of Zapata County, on the border in South Texas, won a prestigious International Latino Book Award in 2021 for her book *¡Todos al rodeo! A Vaquero Alphabet Book.* The children's picture book is the third in her series of what she calls "ABC books," which tell a story through the letters of the alphabet. She uses the genre to infuse Hispanic culture into children's literature to foster bilingual literacy.

It's the kind of book she wishes she had as a young student.

"I was always trying to unravel this mystery called English," González Pérez says. "It was a sink-or-swim approach to learning." Her moment of awakening, she says, came in the eighth grade, when she first enrolled in a Spanish course and received a textbook for that class. "This is the book they should have given me in the first grade," she says. "They did it backwards." González Pérez's vaquero book teaches children that the American cowboy and the cattle industry itself emerged from the arrival of Spaniards who introduced the horse to North America. Words like "rodeo" and "lasso," the book points out, are Spanish in origin.

The book also draws from the author's own life; González Pérez, a member of Medina Electric Cooperative, comes from a land-grant family whose large property holdings were bestowed on early Texas settlers by the Spanish crown. She grew up on a 1,000-acre ranch that touched the banks of the Rio Grande, so she's familiar with the vaquero way of life. Her Texas roots reach back so many generations that she calls herself a Tejana instead of a Mexicana.

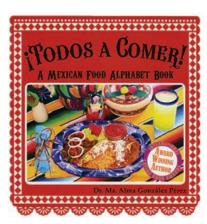

González Pérez frequently uses the Spanish word for courage—*coraje*—as she speaks. Her cultural awareness in a part of the state where Hispanic culture is the norm gave her the coraje to excel in school even though she had to learn English while she was learning other subjects. And her mother's insistence on excelling gave González Pérez a sense of self, she says. "I never felt that I needed to be anybody else other than who I was."

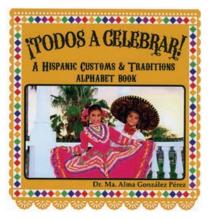

So with a sense of coraje, González Pérez left the cultural comfort of South Texas to master English by immersion. She attended Texas Woman's University in Denton in the 1970s, then "relatively devoid" of Hispanic people, she says.

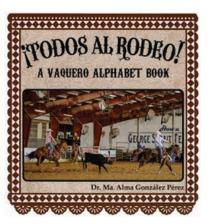

After securing undergraduate and master's degrees, González Pérez returned to South Texas, where she taught, raised a family and eventually attended Texas A&M International University in Laredo for her doctorate. Her dissertation on the relationship between Spanish proficiency and academic achievement among high school graduates in South Texas fueled what would become a lifelong pursuit.

Literacy, her study showed her, extends beyond the pages of books into cultural understanding. It's the context on which idioms are built and understood, and it's the antitoxin of cultural misunderstanding and outright xenophobia.

González Pérez frequently uses the Spanish word for courage—*coraje*—as she speaks. "I never felt that I needed to be anybody else other than who I was."

iterature, she believes, immerses readers in the experiences of others—puts them in the shoes of protagonists. But as a professor at the University of Texas-Pan American (now UT Rio Grande Valley), González Pérez was frustrated by a lack of culturally relevant Hispanic literature

available for her students. They were studying to become bilingual teachers using a curriculum based in English.

"I started gauging them, and that's when I learned that they had not been exposed to any literature written by Hispanic authors," González Pérez says. That sparked something in the professor.

Lino Garcia Jr., a retired UTRGV professor, sees the need for Hispanic stories from Hispanic authors.

"We should be doing that at the pre-K level," he says. "Instead of talking about the Taj Mahal, we should be talking about Spanish missions, about the Camino Real about things that Hispanic students can relate to. This gives them a sense of identity. This gives them a sense of worth."

González Pérez's first book was *¡Todos a Comer! A Mexican Food Alphabet Book*—the best-selling of her series for children. The second book, *¡Todos a Celebrar!*, spotlighted Hispanic customs and traditions.

Of course, writing culturally inclusive books is one thing; getting them distributed, González Pérez discovered, was a big, new challenge. So with the help of her three daughters, she launched Del Alma Publications (*del alma* means "of the soul"). An attorney, a business major, and an engineer and graphic designer, Anita Pérez, Maricia Rodriguez and Teresa Estrada, respectively, helped their mother get the

business going in 2008.

"I have a dream team in my daughters," González Pérez says. "I told my daughters, 'Let's play with it for five years. If it flies, great. If it doesn't, nothing was lost but a lot was learned."

It flew.

González Pérez's initial goal was to target South Texas. But her first bulk order of more than 25 books came, instead, from Redondo Beach, California. Next came an order from Philadelphia for several hundred books. The demand was nationwide. Del Alma Publications has shipped thousands of books over the past 14 years—to individuals, schools, libraries, book donors and nationwide book distributors.

But she isn't done yet.

"We've made great strides in meeting the biliteracy challenges of the Hispanic learner," González Pérez says. "However, we still need to write many more books about stories that our children need to read.

"Not only to inform and educate but to help them develop a greater sense of cultural identity and pride."

Enter online to win González Pérez's three bilingual alphabet books, above.

Good afternoon,

As a local business, we understand the importance of conserving energy and saving money, particularly in a world of **more frequent ice storms** and wildfires. The past couple years of winter storms have impacted us all. The challenge of keeping our homes warm and secure is always on our minds. And then there is the pain of **skyrocketing fuel prices...**

The best windows and doors ensure an extra layer of security for your family. They'll help retain the climate you pay for by keeping heat in in the winter and heat out in the summer.

If an upgrade to make your home comfy and efficient makes sense, I'm happy to offer you this special reader's discount this month! **Please give my team a call. We'll come work up a price at a time that fits your busy life!**

Warmly,

Steve Johnston General Manager Renewal by Andersen of North Texas www.LocalWindowDiscount.com

Clogged, Backed—up Septic System...Can anything Restore It?

DEAR DARRYL: My home is about 10 years old, and so is my septic system. I have always taken pride in keeping my home and property in top shape. In fact, my neighbors and I

are always kidding each other about who keeps their home and yard nicest. Lately, however, I have had a horrible smell in my yard, and also in one of my bathrooms, coming from the shower drain. My grass is muddy and all the drains in my home are very slow.

My wife is on my back to make the bathroom stop smelling and as you can imagine, my neighbors are having a field day, kidding me about the mud pit and sewage stench in my yard. It's humiliating. I called a plumber buddy of mine, who recommended pumping (and maybe even replacing) my septic system. But at the potential cost of thousands of dollars, I hate to explore that option.

I tried the store bought, so called, Septic treatments out there, and they did Nothing to clear up my problem. Is there anything on the market I can pour or flush into my system that will restore it to normal, and keep it maintained?

Clogged and Smelly – Lubbock, TX

DEAR CLOGGED AND SMELLY: As a reader of my column, I am sure you are aware that I have a great deal of experience in this particular field. You will be glad to know that there IS a septic solution that will solve your back-up and effectively restore your entire system from interior piping throughout the septic system and even unclog the drain field as well. **SeptiCleanse® Shock and Maintenance Programs** deliver your system the fast active bacteria and enzymes needed to liquefy solid waste and free the clogs causing your back-up.

This fast-acting bacteria multiplies within minutes of application and is specifically designed to withstand many of today's anti-bacterial cleaners, soaps and detergents. It comes in dissolvable plastic packs, that you just flush down your toilets. It's so cool. Plus, they actually Guarantee that it restores ANY system, no matter how bad the problem is.

SeptiCleanse® Shock and Maintenance Programs are designed to work on any septic system regardless of design or age. From modern day systems to sand mounds, and systems installed generations ago, I have personally seen SeptiCleanse unclog and restore these systems in a matter of weeks. I highly recommend that you try it before spending any money on repairs. SeptiCleanse products are available online at www.septicleanse.com or you can order or learn more by calling toll free at 1-888-899-8345. If you use the promo code "TXS16", you can get a free shock treatment, added to your order, which normally costs \$169. So, make sure you use that code when you call or buy online.

The U.S. Mint Just Struck Morgan Silver Dollars for the First Time in 100 Years!

It's been more than 100 years since the last Morgan Silver Dollar was struck for circulation. Morgans were the preferred currency of cowboys, ranchers and outlaws and earned a reputation as the coin that helped build the Wild West. Struck in 90% silver from 1878 to 1904, then again in 1921, these silver dollars came to be known by the name of their designer, George T. Morgan. They are one of the most revered, most-collected, vintage U.S. Silver Dollars ever.

Celebrating the 100th Anniversary with Legal-Tender Morgans

Honoring the 100th anniversary of the last year they were minted, the U.S. Mint struck five different versions of the Morgan in 2021, paying tribute to each of the mints that struck the coin. The coins here honor the historic New Orleans Mint, a U.S. Mint branch from 1838–1861 and again from 1879–1909. These coins, featuring an "O" privy mark, a small differentiating mark, were struck in Philadelphia since the New Orleans Mint no longer exists. These beautiful coins are different than the originals because they're struck in 99.9% fine silver instead of 90% silver/10% copper, and they were struck using modern technology, serving to enhance the details of the iconic design.

Very Limited. Sold Out at the Mint!

The U.S. Mint limited the production of these gorgeous coins to just 175,000, a ridiculously low number. Not surprisingly, they sold out almost instantly! That means you need to hurry to add these bright, shiny, new legal-tender Morgan Silver Dollars with the New Orleans privy mark, struck in 99.9% PURE Silver, to your collection. Call 1-888-395-3219 to secure yours now. PLUS, you'll receive a BONUS American Collectors Pack, valued at \$25, FREE with your order. Call now. These will not last!

FREE SHIPPING! Limited time only. Standard domestic shipping only. Not valid on previous purchases.

MESSAGE FROM GENERAL MANAGER/ CEO

JEFF LANE

Natural Gas Keeping Power Prices High

WE ALL KNOW HOW IT GOES in Texas: When the summer temperatures start to soar, the power bill often follows. Running the air conditioner comes with a price, and we can only do our best to soften the blow—keeping the front door closed, fans on and the stove off.

But this year, forces beyond any of us are poised to make summer electric bills even worse.

You may have already noticed that the price you pay for power has gone up. Trinity Valley Electric Cooperative didn't raise our rates, but the runaway cost of natural gas is having a nasty effect on electric bills across Texas. The cost your co-op pays for wholesale power has been much higher this year, and there's no relief on the horizon.

Since the winter storm in February 2021 that impacted most of our state's grid, prices for natural gas—which fuels about half of Texas' power generation—have risen sharply. Natural gas cost an average of \$1.91 per million Btu in February 2020 but \$4.69 in February of this year—nearly 2.5 times higher. The Energy Information Administration expects those prices to stay north of \$3.50 through 2023.

That means most electric generators are paying far more to generate power—costs that get passed along to TVEC and that we unfortunately must pass along to our members. We do that through the power cost recovery factor that's built into your bill. Don't get me wrong: We're not happy about this either. All your cooperative's directors and most of its employees, like me, are members of the co-op. Our power bills are impacted by this, too.

As a nonprofit electric cooperative, none of the extra energy costs stay here at TVEC. And outside the energy expense, we are working hard to evaluate and minimize our operational costs and keep within our budgets to keep prices down.

I know significant inflation, including higher prices on all of life's necessities, is putting a damper on family budgets, and the higher energy costs you've been paying are probably the last thing you want to hear about as the summer months start to heat up.

But the old math still applies: Less power still costs less. With increased vigilance this summer, you can stay ahead of these increased costs. Swap out your old thermostat for a smart model, if you're able, and make sure to take care of preventive maintenance on your A/C so that it can run at peak efficiency.

For more help with conservation tools and tips, visit texascooppower.com/energy. Every kilowatt saved helps—now more than ever.

By working together as friends, neighbors and colleagues, we've made it through some challenging times over the past couple of years. We'll get through this, too. ●

What is the power cost recovery factor (PCRF) charge on my electric bill?

Generation Companies

Electric generators purchase fuel to produce the power we use.

TVEC's Energy Cost

The cost of power passes through as higher costs for wholesale power.

Your Electric Bill

The PCRF charge on your bill reflects the fluctuating cost of fuel used to produce electricity.

Trinity Valley Electric Cooperative crews and contractors had a challenge in April after construction equipment snagged a line and broke a pole in Kaufman County. The pole included overhead and underground service connections making the pole change-out even more complicated than usual.

TVEC June Highlights: Upcoming Election, Electronic Billing

• You may have noticed a slight change to your bill last month as Trinity Valley Electric Co-op's billing service provider had to switch to brown

paper envelopes due to supply chain issues. It serves as a good reminder to consider paperless electronic billing, which helps save on mailing costs.

• Electronic billing is

just one of the ways you can use technology to save. Daily electricity usage alerts, high usage alerts and more are available through the TVEC Member Portal at tvec.net and through the myTVEC mobile app.

• Co-ops operate by seven governing principles, the second of which is Democratic Member Control. Look for director election announcement on Page 21.

• Charter Communications/Spectrum will soon begin adding communications lines on TVEC poles in parts of our service area. Their work will include tree trimming and utility work in many locations over the next few years. While they will be working in our area, they are not performing work for TVEC. Please look for identifying information on vehicles and personnel to know which company is performing work. We will have more information in upcoming magazines, emails and on tvec.net.

• Be sure to check out our reader appreciation contests for two chances to win \$100 bill credits. See below for details on the hidden account number contest, and answer our energy trivia on page 24.

Win \$100 Just for Reading

Hidden somewhere on pages 18–25 is a TVEC account number. Read closely. If the account number is yours, contact the member services department by June 30 to receive a \$100 credit on your electric bill. Don't miss out—you could be our winner.

TVEC ENERGY MANAGEMENT SUPERVISOR

CHRIS WALKER, BAP

NOT ALL OLD HOUSES ARE HAUNTED, but I've seen plenty of homes that have lingering ghosts of dated construction techniques, aging materials and many spooky energy unknowns hiding in the walls and attics.

The Energy Advisor:

If you have a much older home, particularly a house more than 20 years old, it is almost a sure bet that there are some things to be done to catch up with modern homes.

Buildings don't age all that well, and unless every owner has been diligent with maintenance, the structure can develop significant air leaks. Even if your older home was built well, materials and building standards have come a long way.

Insulation

Current standards include R-13 wall insulation and R-38 above the ceiling, but that hasn't always been the case. In the ceiling this can be a very cost-effective upgrade.

Wall insulation may be a different story. If you have any remodeling plans in the works for this summer, consider your options while you have things torn up.

There are also options for adding foam or blown-cellulose insulation using small holes rather than pulling off sheetrock or wall boards.

Be sure to watch out for safety

concerns like lead paint or asbestos in older homes.

Windows

Windows are another area that has been greatly affected by modern technology and manufacturing.

If your home has single-pane windows, or double-pane windows that show signs of leakage between the panes, your energy dollars are going out the window in a literal way. Air gaps in window sashes and around the frames of windows should be checked as well.

Simple caulking and foam rubber gap sealing products can make a big difference here. Other products, like plastic window film and even heavy curtains, can also help on a budget.

Ultimately, new windows can pay for themselves over time by lowering cooling and heating costs, although the upfront costs can be prohibitive.

Floors and Ceilings

Older Homes Pose Unique

Energy Challenges

Many older homes on pier-and-beam foundations have very little sealing below the floor. Carpets and rugs can help your feet feel comfortable, but there could be cracks and gaps allowing airflow into and out of your house.

The same happens above your head, where cracks around electrical fixtures, attic openings, and holes for wiring and air ducts can all make an easy path for air to escape.

HVAC Equipment

As with the house itself, your A/C unit may also need

some updates. Well-kept units can operate efficiently, but dirt builds up over the years and affects how well your system can do its job. A professional inspection and cleaning can add years of life to the unit and save you money over time.

Newer units can be a considerable saving as well, particularly if you add a heat pump in place of resistive heating in the winter.

Other Considerations

Safety is always our top priority here at the co-op, so please make sure any updates that involve electrical boxes or wiring are done safely. We are happy to provide temporary disconnections while work is being done.

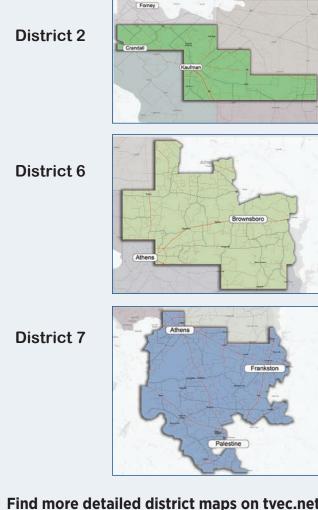

Every little bit helps. It isn't always easy to see on a particular electric bill, but for every minute the AC doesn't run, there is a savings.

Notice of Board Election

Trinity Valley Electric Cooperative will hold an election for the board members representing District 2 (incumbent: Jerry Priest) District 6 (incumbent: Howard Tillison) and District 7 (incumbent: Jack Endres) in conjunction with the annual meeting to be held in October.

As a member, if you are interested in having your name placed before the Nominating Committee to represent your district, you must complete a nomination form. Qualifications are included on the form. Contact Leah Bass at (469) 376-2297 for information on how to obtain a nomination form. Forms must be received at the TVEC headquarters office in Kaufman by 4:45 p.m. on July 1, 2022.

Find more detailed district maps on tvec.net. Check your billing statement or call TVEC Member Services at (800) 766-9576 to verify your board district.

A World Without GFCIs

WHAT WOULD HAPPEN if GFCI protection was not required?

Ground-fault circuit interrupters are fast-acting circuit breakers designed to shut off power in the case of a ground fault to prevent electrical incidents and injuries. Ground faults can occur when electricity comes in contact with water, such as in bathrooms and kitchens or outdoors.

GFCIs were first introduced in bathrooms as required by the National Electrical Code in 1975, but requirements have increased over the years as electricity use has grown, along with the potential contact of electricity and water in homes.

After their initial widespread adoption, there was an 80% drop in electrocutions in bathrooms and a 93% drop in consumer product electrocutions, according to Electrical Safety Foundation International.

If GFCIs were not required, there would be a 603% increase in electrocutions and 1,118% increase in consumer product electrocutions, ESFI estimates.

Make sure you have GFCI outlets in these locations:

- Outdoor
- receptacles
- BathroomsGarages
- Spas and hot tubs
- Kitchens
- Crawl spaces
- All sinks
- Laundry/utility rooms
- Outdoor hardwired outlets
- Sump pumps

TEXAS DIVISION OF EMERGENCY MANAGEMENT

Hurricane Preparedness Guidelines Hurricane season is June 1-November 30

Preparedness Checklist

- Make an evacuation plan. Find activated evacuation routes at drivetexas.org or by dialing 1-800-452-9292. Call 211 to find out if you live in an evacuation zone.
- Sign up for emergency alerts. Make sure your mobile device is enabled to receive wireless emergency alerts.
- Prepare an emergency supply kit. Learn how to build an emergency kit at ready.gov/build-a-kit.
- Review your home insurance policy.
- Register with the State of Texas Emergency Assistance Registry at stear.tdem.texas.gov or by dialing 211 if you live in an evacuation zone and:
 - Have a disability or medical needs and do not have a car or other vehicle to use in an evacuation.
 - Have a disability or medical needs and do not have friends or family to help in an evacuation.

Information collected for STEAR is confidential.

Hurricane Preparedness Online Resources

Stay Safe Around Cooling Systems

HOT WEATHER BRINGS increased use of air conditioners, but contact with malfunctioning cooling equipment accounts for a significant number of injuries and millions of dollars in property damage each year.

Air conditioning units, fans and related equipment were involved in an estimated 7,400 home structure fires in the U.S. in 2010, causing 29 deaths, 249 injuries and \$207 million in direct property damage, according to the National Fire Protection Association. The data show that about a dozen electrocutions per year involve air conditioners and a handful more involve fans, on average.

Electrical Safety Foundation International recommends following a few guidelines when dealing with your home's cooling systems.

Keep safety in mind when selecting cooling equipment for your home.

Have a qualified, licensed electrician install and service any electrical equipment in your home.

Have electric-powered equipment inspected and maintained regularly for safety. 30054110001

Make sure your equipment has the mark of a recognized safety testing laboratory, like Underwriters Laboratories. ■

INFLATION

Saving Together Helps Us All

ELECTRIC CO-OPS STARTED WITH THE GOAL of bringing power to rural America, and for more than 80 years our members have made the member-owned, nonprofit utility model work for us all.

That has meant rising together to meet the challenges we've faced as technology, culture and energy markets changed over the years.

The current challenge includes inflation and rapidly rising costs for everything, here at the co-op and in household budgets.

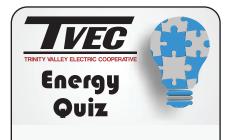

To combat this and keep costs as low as possible, we are asking Trinity Valley Electric Cooperative members to consider switching to bank draft or e-check payments. This can help us save thousands of dollars in credit card transaction fees, and pass those savings back to you.

Additional savings can come in the form of electronic billing, saving the cost of postage. Payment via electronic check through the myTVEC mobile app or TVEC Member Portal at tvec.net are the quickest, most convenient and easiest ways to pay and save.

Thank you from all of us here at TVEC.

Average Transaction Expense by Payment Type

Payment Method	Average Cost per Payment
Auto Bank Draft	\$.15
Electronic Check	\$.50
Mailed Check	\$.67
Phone/In-Person Payments	\$1.48
Credit Card Payments	\$1.63

What is the measure of a material's insulation value or thermal resistance?

A. Absorbency Rate B. R-Value C. Btu (British Thermal

Unit)

Send your answer and contact information to **contest@tvec.coop** or contact TVEC Member Services by June 30. One \$100 bill credit winner will be chosen from all correct replies. Look for the correct answer in a future **Texas Co-op Power** magazine.

May Energy Quiz: Bulb Efficiency

THERE IS A REASON INCANDESCENT light bulbs get so hot—a large portion of the energy they use goes into making heat. Only about 5% to 10% of their energy goes to making light.

Modern LED bulbs are much more efficient, using up to 80% of their electrical demand for light.

That is how a 7-watt LED bulb can produce about the same amount of light as a 40-watt incandescent.

Congratulations to Karissa Collins of Kaufman who correctly answered our April quiz about Texas' nuclear power plants.

Help 4 Heroes USA members Phil Evans and Roy Gowin accept a TVEC Charitable Foundation grant of \$1,000 from Joy Long, TVEC public relations representative.

Operation Round Up Spotlight: Veterans Support Organizations

VETERANS DAY COMES ONCE A YEAR, but for some area organizations, the support and care for our nation's military servicemen and women is a year-round commitment.

The TVEC Charitable Foundation has provided support for many area nonprofits that help with a range of services, connections and memorial efforts.

One organization that recently received a grant was Help 4 Heroes USA, which provides help for veterans, particularly assisting with mobility and vehicle issues.

The TVEC Charitable Foundation is funded entirely by Operation Round Up donations on your electric bills. Your generosity has added up to more than \$3 million in grants for local community support organizations since the program's inception in 2013.

Find more information and a full list of grant recipients at tvec.net/charitable-foundation.

SECRETS OF A BILLIONAIRE REVEALED

"Price is what you pay; value is what you get. Whether we're talking about socks or stocks, I like buying quality merchandise when it is marked down."

- wisdom from the most successful investor of all time

We're going to let you in on a secret. Billionaires have billions because they know value is not increased by an inflated price. They avoid big name markups, and aren't swayed by flashy advertising. When you look on their wrist you'll find a classic timepiece, not a cry for attention- because they know true value comes from keeping more money in their pocket.

We agree with this thinking wholeheartedly. And, so do our two-and-a-half million clients. It's time you got in on the secret too. The Jet-Setter Chronograph can go up against the best chronographs in the market, deliver more accuracy and style than the "luxury" brands, and all for far, far less. \$1,150 is what the Jet-Setter Chronograph would cost you with nothing more than a different name on the face.

With over two million timepieces sold (and counting), we know a thing or two about creating watches people love. The Jet-Setter Chronograph gives you what you need to master time and keeps the superfluous stuff out of the equation. A classic in the looks department and a stainless steel power tool of construction, this is all the watch you need. And, then some.

Your satisfaction is 100% guaranteed. Experience the Jet-Setter Chronograph for 30 days. If you're not convinced you got excellence for less, send it back for a refund of the item price.

Time is running out. Now that the secret's out, we can't guarantee this \$29 chronograph will stick around long. Don't overpay to be underwhelmed. Put a precision chronograph on your wrist for just \$29 and laugh all the way to the bank. Call today!

Doctor's Orders

UT medical school faculty left Galveston to provide aid during World War I

BY MARTHA DEERINGER . ILLUSTRATION BY DANA SMITH

WHEN DR. ETHEL LYON HEARD returned to Texas after serving overseas with the Red Cross during World War I, she was holding tightly to the hand of a 3-yearold orphan from France named Jean Thibaut. After the child's house was nearly destroyed by a mortar in 1918, he was discovered in a back room the following day and brought to the hospital where Lyon Heard worked.

Before the war, Lyon Heard taught classes in hygiene and child care at the University of Texas' medical school in Galveston. Making space in her life for a child orphaned by war was just one of the countless acts of service and moments of bravery undertaken by UT faculty when the U.S. joined the war effort.

"These men and women sacrificed their lives and future professions by enlisting in the war effort in Europe," says Dwayne Jones, director of the Galveston Historical Foundation. "The effects of the war redirected each life and altered the direction of health care forever."

Known today as the University of Texas Medical Branch, the school started in October 1891 with 13 instructors, 23 students and one building.

The mettle of the school was tested right away when the devastating 1900 Galveston hurricane struck. Much of the city was destroyed, but Galveston doctors led recovery efforts.

When the U.S. formally entered World War I in 1917, new and catastrophic forms of combat—trench warfare and chemical and biological weapons—required increased medical care for troops. The situation worsened when the Spanish

FOOTNOTES IN TEXAS HISTORY

flu pandemic swept across the battlegrounds of Europe, killing thousands in just a few days. The American Expeditionary Forces sent out an urgent call for physicians, medical faculty and medical students to assist in the war effort.

The Council of National Defense urged medical students to stay in school and faculty to continue their critical teaching duties. But that didn't stop some of UT's medical personnel, who joined personnel from other leading U.S. universities in enlisting.

Lyon Heard's husband, Dr. Allen George Heard, adjunct professor of pediatrics, joined the medical corps and was assigned to British forces in England. Wounded twice, he received two citations for "conspicuous bravery" in action on the battlefields of France.

Dr. Herbert Lee McNeil, an assistant professor of clinical pathology, was assigned to oversee a hospital with 4,000 patients, later serving on the front lines. Dr. Estill Lee Rice was business manager of the school's medical magazine as a student. He served aboard the USS Nicholson, where he led a rescue mission to treat sailors injured in a German U-boat attack. Dr. Jess Autry Flautt was an instructor in obstetrics and gynecology before enlisting in the Navy Medical Corps on the day after the U.S. declared war. He rescued men from a ship loaded with explosives.

In November 2019, UTMB unveiled a Texas Historical Commission marker to honor the extraordinary contributions of eight members of the school's faculty and 11 students who served during the war effort. Some of the physicians sacrificed their hard-earned professional positions, and in some cases their lives, to serve.

Dr. Ben Raimer, UTMB's president, hopes the marker inspires today's physicians. "The physicians honored on the new historical marker represent service before self, which is what we continue to instill in our students today."

Weeknight Dinners

Busy day? No need to sweat it with these stress-free dishes

BY MEGAN MYERS, FOOD EDITOR

Quick and easy dinners are the backbone of our meals. One of my favorites is a stir-fry—you can throw almost anything you have on hand in, and less than 30 minutes later you have a full meal. This beef and green bean stir-fry is a go-to in my family, especially when we have lots of green beans from the garden or tucked away in the freezer. If you like it spicy, add your favorite hot sauce to the dish.

Beef and Green Bean Stir-Fry

pound ground beef
 pound green beans, trimmed
 tablespoons soy sauce
 2-3 cloves garlic, minced
 tablespoon grated fresh ginger
 1-2 teaspoons honey
 Crushed red chile flakes (optional)
 Cooked rice, to serve

1. In a large sauté pan over medium-high heat, cook the ground beef until browned, breaking into pieces as it cooks. Drain excess grease if desired.

2. Stir in the green beans and cook for about 5 minutes, until beans are bright green and crisp-tender.

3. Whisk together soy sauce, garlic, ginger and honey, then pour into sauté pan. Cook another 2–3 minutes, until heated through, stirring to coat. Finish with chile flakes if desired and serve with rice.

SERVES 4

Follow along with Megan Myers and her adventures in the kitchen at stetted.com, where she features a recipe for Stuffed Shells With Chicken.

Spaghetti Carbonara LINDA HARDWICK HOUSTON COUNTY EC

Carbonara is the ultimate comfort food and easier than you might think. This version brings in heat with crushed red chile flakes, so add according to your tastes.

1 pound spaghetti or other pasta
4–6 slices bacon, chopped
5–6 cloves garlic, minced
1 teaspoon crushed red chile flakes, or to taste
½ cup dry white wine
2 eggs
¾ cup grated Parmesan cheese
Salt and pepper
2 tablespoons chopped fresh parsley (optional)

1. Bring a large pot of salted water to boil and add pasta, cooking according to package instructions. Reserve ½ cup pasta water and drain pasta, setting aside to keep warm.

2. While the pasta cooks, in a large frying pan over medium heat cook bacon until crisp. Remove bacon and set aside.

3. To the same pan, add garlic and red chile flakes and sauté for 1 minute, then add white wine, scraping up any stuck bits on the bottom of the pan.

4. Whisk together eggs and Parmesan, then add pasta, egg mixture, bacon and reserved pasta water to the frying pan, tossing with tongs to mix together and create a creamy sauce. Add salt and pepper to taste, and serve with parsley.

SERVES 6

\$500 WINNER

Eggplant Pizzettes KAY LEUSCHNER NUECES EC

Quick, easy and filling, this is a twist on standard eggplant Parmesan. Serve it as is for a lighter meal or add to a dish of pasta with extra sauce.

SERVES 4

- 1/2 cup breadcrumbs
- 1/2 teaspoon dried oregano
- 1/2 teaspoon dried basil
- 1/2 teaspoon garlic powder
- 3/4 cup grated Parmesan cheese
- 1/4 cup mayonnaise
- 1 eggplant, cut into ½-inch slices
- 1 jar (26 ounces) spaghetti sauce
- 1 cup shredded mozzarella or other cheese

1. Preheat oven to 425 degrees. In a shallow bowl, combine breadcrumbs, spices, garlic powder and Parmesan.

2. Spread a thin layer of mayonnaise on both sides of eggplant slices. Dip each slice into breadcrumb mixture, pressing gently to adhere the coating to both sides.

3. Arrange eggplant on an ungreased rimmed baking sheet and bake 15 minutes or until tender.

4. Remove from oven and reduce temperature to 375 degrees. Spread each eggplant slice with a dollop of spaghetti sauce and top with mozzarella. Return pan to the oven for 10–15 minutes or until cheese is melted.

HOLIDAY SIDES DUE JUNE 10 We know there's pride in the sides at your holiday feast. Submit your recipes on our website by June 10 for a chance to win \$500.

Zuppa di Ceci SIMONA CUDE BANDERA EC

This easy dish-the name means chickpea soup-gets a burst of vibrant flavor from lemon juice and capers. Cude recommends mashing some of the chickpeas before serving for a creamier soup.

2 tablespoons olive oil 1/2 onion, finely chopped 3 cloves garlic, minced

1 medium golden potato, diced 1 can (15 ounces) chickpeas, drained and rinsed Pinch crushed red chile flakes 3 cups vegetable broth 1 teaspoon salt 1/2 teaspoon pepper 2 tablespoons lemon juice 2 cups croutons, divided use 2 tablespoons drained capers (optional) Chopped fresh parsley (optional)

1. In a large soup pot over low heat, heat oil. Add onion and garlic and cook 2 minutes. Add potato and cook another 2 minutes.

2. Stir in chickpeas, chile flakes, broth, salt and pepper. Raise heat to medium-high and bring to a boil, then reduce to low and cook 20 minutes, stirring occasionally.

3. Remove from heat and stir in lemon juice. Taste and adjust seasonings if desired.

4. Add ¹/₂ cup croutons to each of 4 bowls and ladle soup over the top. Top with capers and parsley, if using.

SERVES 4

Batching for Busy Days

BY MEGAN MYERS

You can freeze cooked beans and grains, like rice and quinoa, for easy use later.

1. Cook as usual, doubling or tripling the recipe for larger batches.

2. Let cool completely. Cool grains quickly by spreading onto a large sheet pan.

3. Scoop into freezer-safe bags or containers in 1- or 2-cup increments. Remove as much air as possible, then seal, label and store in the freezer.

4. Thaw overnight in the refrigerator or more quickly in a bowl of warm water; or add to your favorite soups while frozen.

SACRED STONE OF THE SOUTHWEST **IS ON THE BRINK OF EXTINCTION**

enturies ago, Persians, Tibetans and Mayans considered turquoise a gemstone of the heavens, believing the striking blue stones were sacred pieces of sky. Today, the rarest and most valuable turquoise is found in the American Southwest- but the future of the blue beauty is unclear.

On a recent trip to Tucson, we spoke with fourth generation turquoise traders who explained that less than five percent of turquoise mined worldwide can be set into jewelry and only about twenty mines in the Southwest supply gem-quality turquoise. Once a thriving industry, many Southwest mines have run dry and are now closed.

We found a limited supply of turquoise from Arizona and purchased it for our Sedona Turquoise Collection. Inspired by the work of those ancient craftsmen and designed to showcase the exceptional blue stone, each stabilized vibrant cabochon features a unique, one-of-a-kind matrix surrounded in Bali metalwork. You could drop over \$1,200 on a turquoise pendant, or you could secure 26 carats of genuine Arizona turquoise for just \$99.

Your satisfaction is 100% guaranteed. If you aren't completely happy with your purchase, send it back within 30 days for a complete refund of the item price.

Jewelry Specifications: • Arizona turquoise • Silver-finished settings

HIT THE ROAD

Eruption Evidence

Drive into the Paisano Pass Volcano in far West Texas to view prehistory

BY CHET GARNER

IF I CLOSE my eyes to imagine a volcano, I see a Polynesian island with palm trees, beaches and an endless ocean. I definitely don't imagine the cactus-filled landscapes of West Texas.

Yet there I was, standing on the shoulder of U.S. Highway 90, halfway between Alpine and Marfa, staring at the Paisano Pass Volcano, which fortunately for visitors—has been dormant for about 30 million years.

The drive west from Alpine to the ancient site was impressive. Red cliffs and strange rock spires on each side of the road made me feel like I was traveling back to the Cretaceous Period. Honestly, I wouldn't have been surprised if a T. rex had crossed the road in front of me. I crested a hill and dropped into a valley, where I pulled into a roadside park to read an educational panel about the lava-formed landscape.

All around me were colorful cliffs, knobby boulders and crag-covered mountains that were formed during the Oligocene Epoch, 23–33 million years ago. Dinosaurs were extinct then, but giant mammals walked the earth, including 18-foot-tall beasts that looked like a mix between horses and rhinos. It was during this era that the Paisano Pass Volcano exploded and then collapsed back onto itself, leaving a 3-mile-wide caldera that stretches as far as you can see from the small park.

Geologists come from all over the world to study this volcano because it exposed layers of rock normally hidden miles below the surface of the earth. The Big Bend is still tectonically active and has even experienced violent earthquakes as recently as 1998. While another volcanic eruption is unlikely, I never say never in Texas. And so I promptly got back in my truck and continued down the road.

ABOVE Chet studies a roadside panel depicting the history and geology of the Paisano Pass Volcano.

Chet vs. the volcano: It's not a movie, but it is a video on our website. Watch all his Texplorations on *The Daytripper* on PBS.

Pop's Light Touch

A keepsake reminds a daughter of her father's illuminating ways

BY BABS RODRIGUEZ ILLUSTRATION BY NAVINA CHHABRIA

MY FATHER was always telling someone to turn out a light.

Except when he was telling one of his five children to turn one on.

"Time for bed, turn out your light." "Turn out the light you left on in the

bathroom."

"Turn on your desk light, you'll ruin vour eves."

A military man who ran a tight ship at home, Pop had a sixth sense when it came to knowing who had left an unoccupied room without flipping a switch or who was reading in the dark.

I think about him whenever I set up the furnishings in a new household because he taught me the power of light to set a mood. He had strong opinions about which combination of lamps would generate the best conversation

or encourage lingering over dinner orwith a measured flipping of switchesnot so subtly end an evening.

For my 13th birthday, I was allowed to host my very first boy-girl fiesta, made yet more festive by the number of string lights he hung in the backyard trees. However, that gesture may have been less about mood setting and more about oversight. That was definitely how he used the porch lights, flashing them on and off during my high school years and sending clear messages to any one of us daughters hovering outside with a date for what he considered too long.

Maybe his time on the air base or studying the lighted dials in a bomber's cockpit made him keenly attuned to messaging via lighting, but he never bought a lamp or a fixture without some research. Except for one.

Once, at an antiques show, he impulsively purchased a tiny brass lamp. He called it a fairy lamp, although it looked nothing like the glass Victorian-era candle lamps of that name. It was charming, with signs of the maker's hand in the unpolished brass base and a thin metal shade that looked like a pointed gnome's cap.

When he bought it, I was sad that the lamp's wiring was so dangerously undone that there was no doubt it was a fire hazard. And while he forbade me from ever actually using it, I kept that lamp in my room, imagining the places it might have illuminated in years past.

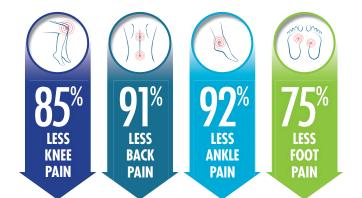

Pop had it rewired for me when I left for college, and it's traveled with me around the world. It is the most meaningful gift I ever received, but in case the metaphor eluded my young self, he included a card: "If you get homesick, Daughter, know I've always left a light on for you."

I think of him every time I switch it on, but only after I've turned out all the lights I'm not using.
